## ABSOLUTE RETURN FUND SUMMARY

### Investment Objective

The Fund seeks a positive total return.

### Fees and Expenses

These tables are intended to help you understand the various costs and expenses you will pay if you buy and hold shares of the Fund. You may qualify for sales charge discounts if you and your family invest, or agree to invest in the future, at least \$50,000 in the aggregate in specified classes of certain *Wells Fargo Advantage Funds*<sup>®</sup>. More information about these and other discounts is available from your financial professional and in "A Choice of Share Classes" and "Reductions and Waivers of Sales Charges" on pages 27 and 29 of the Prospectus and "Additional Purchase and Redemption Information" on page 22 of the Statement of Additional Information.

#### Shareholder Fees (fees paid directly from your investment)

	Class A	Class C
Maximum sales charge (load) imposed on purchases (as a percentage of offering price)	5.75%	None
Maximum deferred sales charge (load) (as a percentage of offering price)	None <sup>1</sup>	1.00%

1. Investments of \$1 million or more are not subject to a front-end sales charge but generally will be subject to a deferred sales charge of 1.00% if redeemed within 18 months from the date of purchase.

#### Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)<sup>1</sup>

	Class A	Class C
Management Fees <sup>2</sup>	0.65%	0.65%
Distribution (12b-1) Fees	0.00%	0.75%
Other Expenses <sup>3</sup>	0.72%	0.72%
Acquired Fund Fees and Expenses <sup>4</sup>	0.25%	0.25%
<b>Total Annual Fund Operating Expenses</b>	<b>1.62%</b>	<b>2.37%</b>
Fee Waivers	0.00%	0.00%
<b>Total Annual Fund Operating Expenses After Fee Waiver<sup>5</sup></b>	<b>1.62%</b>	<b>2.37%</b>

1. The Annual Fund Operating Expenses table and the Example of Fund Expenses table below reflect the aggregate expenses of both the Fund and the MF share class of GMO Benchmark-Free Allocation Fund.
2. The amounts shown reflect the investment advisory fee of both the Fund and GMO Benchmark-Free Allocation Fund.
3. Includes purchase premiums and redemption fees charged by GMO Benchmark-Free Allocation Fund determined by dividing total purchase premiums and redemption fees paid during the period by the average net assets of the Fund.
4. These indirect expenses include interest expense that may be incurred by certain underlying funds.
5. The Adviser has committed through January 31, 2015, to waive fees and/or reimburse expenses to the extent necessary to cap the Fund's Total Annual Fund Operating Expenses After Fee Waiver at 0.76% for Class A and 1.51% for Class C. Brokerage commissions, stamp duty fees, interest, taxes, acquired fund fees and expenses (including the expenses of GMO Benchmark-Free Allocation Fund), and extraordinary expenses are excluded from the cap. After this time, the cap may be increased or the commitment to maintain the cap may be terminated only with the approval of the Board of Trustees.

### Example of Expenses

The example below is intended to help you compare the costs of investing in the Fund with the costs of investing in other mutual funds. The example assumes a \$10,000 initial investment, 5% annual total return, and that operating expenses remain the same as in the tables above. The example also assumes that the Total Annual Fund Operating Expenses After Fee Waiver shown above will only be in place for the length of the current waiver commitment. Although your actual costs may be higher or lower, based on these assumptions your costs would be:

After:	Assuming Redemption at End of Period		Assuming No Redemption
	Class A	Class C	Class C
1 Year	\$730	\$340	\$240
3 Years	\$1,056	\$739	\$739
5 Years	\$1,405	\$1,265	\$1,265
10 Years	\$2,386	\$2,706	\$2,706

## Portfolio Turnover

The Fund pays transaction costs, such as commissions, when it buys and sells securities (or "turns over" its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the example, affect the Fund's performance. During the most recent fiscal year, the portfolio turnover rate was 0% of the value of its portfolio. In addition, the portfolio turnover rate for GMO Benchmark-Free Allocation Fund, in which the Fund invests all of its assets, was 42% for its fiscal year ended February 28th.

## Principal Investment Strategies

The Fund is a diversified investment that invests substantially all of its investable assets in the GMO Benchmark-Free Allocation Fund (the "Benchmark-Free Allocation Fund"), an investment company managed by Grantham, Mayo, Van Otterloo & Co. LLC ("GMO"). GMO seeks to achieve Benchmark-Free Allocation Fund's investment objective by investing in asset classes that GMO believes offer the most attractive return and risk opportunities. The asset classes include:

- U.S. and foreign equity, including emerging markets;
- U.S. and foreign fixed income, including emerging markets; and
- alternative asset classes, including real estate and commodities.

GMO uses multi-year forecasts of returns and risk for asset classes to determine Benchmark-Free Allocation Fund's allocations. The factors considered and investment methods used by GMO can change over time.

Benchmark-Free Allocation Fund is structured as a fund of funds and gains its investment exposures primarily by investing in the GMO Implementation Fund. In addition, Benchmark-Free Allocation Fund may invest in other GMO Funds (together with GMO Implementation Fund, the "underlying funds"), principally GMO Alpha Only Fund, GMO Debt Opportunities Fund, GMO Alternative Asset Opportunity Fund and GMO Emerging Country Debt Fund. GMO Implementation Fund is permitted to invest in any asset class. Benchmark-Free Allocation Fund also may invest in securities or derivatives directly.

Benchmark-Free Allocation Fund seeks annualized excess returns of 5% (net of Benchmark-Free Allocation Fund fees) above the Consumer Price Index, with annualized volatility of 5-10%, over a complete market cycle. GMO does not manage Benchmark-Free Allocation Fund to, or control Benchmark-Free Allocation Fund's risk relative to, any securities index or securities benchmark.

Benchmark-Free Allocation Fund is permitted to invest (through GMO Implementation Fund, another underlying fund or directly) in any asset class, country, or sector and at times may have substantial exposure to a single asset class, country, or sector. In addition, Benchmark-Free Allocation Fund is not restricted in its exposure to any particular market and may invest in securities of companies of any market capitalization. Benchmark-Free Allocation Fund may have indirect exposure to derivatives and short sales through its investment in GMO Implementation Fund and other underlying funds. GMO's ability to shift investments within GMO Implementation Fund and between it and other underlying funds is not subject to any limits.

Benchmark-Free Allocation Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.

While the Fund invests substantially all of its investable assets in the Benchmark-Free Allocation Fund, the Fund may hold cash for short periods of time in order to mitigate the expenses associated with the purchase and sale of shares of the Benchmark-Free Allocation Fund.

## Principal Investment Risks

Because the Fund invests substantially all of its investable assets in Benchmark-Free Allocation Fund, which, in turn, invests all of its assets in a number of underlying funds, the following principal risks are those risks that result from the Fund's indirect investments in the underlying funds or direct investment in Benchmark-Free Allocation Fund. In this section, references to the Fund should be read to include the Fund, Benchmark-Free Allocation Fund and the underlying funds, as appropriate.

The Fund's performance will not correlate perfectly with that of Benchmark-Free Allocation Fund due to the impact of the Fund's fees and expenses and to the timing and magnitude of cash flows into and out of the Fund which will create cash balances that cause the Fund's performance to deviate from the performance of the Benchmark-Free Allocation Fund.

An investment in the Fund may lose money, is not a deposit of Wells Fargo Bank, N.A. or its affiliates, is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency, and is primarily subject to the risks briefly summarized below.

**Commodities Risk.** Commodities prices can be extremely volatile and exposure to commodities can cause the net asset value of the Fund's shares to decline and fluctuate in a rapid and unpredictable manner.

**Counterparty Risk.** The Fund runs the risk that the counterparty to a derivatives contract, a clearing member used by the Fund to hold a cleared derivatives contract, or a borrower of the Fund's securities will be unable or unwilling to make timely settlement payments, return the Fund's margin or otherwise honor its obligations.

**Credit Risk.** The Fund runs the risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligations to pay principal and interest or otherwise to honor its obligations in a timely manner. The market price of a fixed income investment will normally decline as a result of the issuer's, guarantor's, or obligor's failure to meet its payment obligations. Below investment grade securities (also known as "junk bonds") have speculative characteristics, and changes in economic conditions or other circumstances are more likely to impair the capacity of issuers to make principal and interest payments than is the case with issuers of investment grade securities.

**Currency Risk.** Fluctuations in exchange rates can adversely affect the market value of non-U.S. currency holdings and investments denominated in non-U.S. currencies.

**Derivatives Risk.** The use of derivatives involves the risk that their value may not move as expected relative to the value of the underlying assets, rates or indices. Derivatives also present other risks, including market risk, liquidity risk, currency risk, credit risk and counterparty risk.

**Focused Investment Risk.** Focusing investments in countries, regions, sectors, companies, or industries with high positive correlations to one another creates more risk than if the Fund's investments were less correlated.

**Fund of Funds Risk.** The Fund is indirectly exposed to all of the risks of an investment in the underlying funds in which it invests, including the risk that those underlying funds will not perform as expected. Because the Fund bears the fees and expenses of the underlying funds in which it invests, a reallocation of the Fund's investments to underlying funds with higher fees or expenses will increase the Fund's total expenses. The fees and expenses associated with an investment in the Fund are less predictable than those associated with an investment in funds that charge a fixed management fee.

**Large Shareholder Risk.** To the extent that a large number of shares of the Fund is held by a single shareholder (e.g., an institutional investor), the Fund is subject to the risk that a redemption by that shareholder of all or a large portion of its Fund shares will disrupt the Fund's operations.

**Leveraging Risk.** The use of reverse repurchase agreements and other derivatives and securities lending creates leverage. Leverage increases the Fund's losses when the value of its investments (including derivatives) declines.

**Liquidity Risk.** Low trading volume, lack of a market maker, large position size, or legal restrictions may limit or prevent the Fund or an underlying fund from selling particular securities or unwinding derivative positions at desirable prices.

**Management and Operational Risk.** Benchmark-Free Allocation Fund and the underlying funds run the risk that GMO's investment techniques will fail to produce desired results (including the annualized excess returns Benchmark-Free Allocation Fund seeks above the Consumer Price Index). Benchmark-Free Allocation Fund's and the underlying funds' portfolio managers may use quantitative analyses and models, and any imperfections, errors, or limitations in those analyses and models could affect the ability of the portfolio managers to implement such fund's strategies. By necessity, these analyses and models make simplifying assumptions that limit their efficacy. Models that appear to explain prior market data can fail to predict future market events. Further, the data used in models may be inaccurate and may not include the most recent information about a company or a security. The Fund also runs the risk that GMO's assessment of an investment may be wrong or that deficiencies in GMO's or another service provider's internal systems or controls will cause losses or impair operations for Benchmark-Free Allocation Fund or the underlying funds. Benchmark-Free Allocation Fund is also subject to risk because GMO does not manage Benchmark-Free Allocation Fund to, or control Benchmark-Free Allocation Fund's risk relative to, any securities index or securities benchmark.

**Market Disruption and Geopolitical Risk.** Geopolitical and other events may disrupt securities markets and adversely affect global economies and markets. Those events, as well as other changes in non-U.S. and U.S. economic and political conditions, could adversely affect the value of the Fund's investments.

**Market Risk - Asset-Backed Securities.** The market price of fixed income investments with complex structures, such as asset-backed securities, can decline due to a number of factors, including market uncertainty about their credit quality and the reliability of their payment streams. Payment streams associated with asset-backed securities held by the Fund depend on many factors (e.g., the cash flow generated by the assets backing the securities, the deal structure, the credit worthiness of any credit-support provider, and the reliability of various other service providers with access to the

payment stream), and a problem in any one of these areas can lead to a reduction in the payment stream GMO expected the Fund to receive at the time the Fund purchased the asset-backed security.

**Market Risk - Equities.** The market prices of equities may decline due to factors affecting the issuing companies, their industries, or the economy and equity markets generally. If an underlying fund purchases equities at a discount from their value as determined by GMO, Benchmark-Free Allocation Fund runs the risk that the market prices of these investments will not appreciate or will decline for a variety of reasons, one of which may be GMO's overestimation of the value of those investments. An underlying fund also may purchase equities that typically trade at higher multiples of current earnings than other securities, and the market prices of these investments often are more sensitive to changes in future earnings expectations than the market prices of equities trading at lower multiples. Declines in stock market prices generally are likely to reduce the net asset value of the Fund's shares.

**Market Risk - Fixed Income Investments.** The market price of a fixed income investment can decline due to a number of market-related factors, including rising interest rates and widening credit spreads, or decreased liquidity stemming from the market's uncertainty about the value of a fixed income investment (or class of fixed income investments).

**Natural Resources Risk.** To the extent an underlying fund concentrates its assets in the natural resources sector, the value of its portfolio is subject to factors affecting the natural resources industry and may fluctuate more than the value of a portfolio that consists of securities of companies in a broader range of industries.

**Non-Diversified Funds Risk.** The Fund invests a portion of its assets in shares of one or more other funds that are not "diversified" investment companies within the meaning of the Investment Company Act of 1940 (the "1940 Act"). This means they are allowed to invest in the securities of a relatively small number of issuers and/or non-U.S. currencies. As a result, they may be subject to greater credit, market and other risks, and poor performance by a single issuer may have a greater impact on their performance, than if they were "diversified." The Fund may invest without limitation in funds that are not diversified.

**Non-U.S. Investment Risk.** The market prices of many non-U.S. securities fluctuate more than those of U.S. securities. Many non-U.S. markets are less stable, smaller, less liquid, and less regulated than U.S. markets, and the cost of trading in those markets often is higher than in U.S. markets. Non-U.S. portfolio transactions generally involve higher commission rates, transfer taxes, and custodial costs than similar transactions in the U.S. In addition, the Fund may be subject to non-U.S. taxes, including potentially on a retroactive basis, on (i) capital gains it realizes or dividends or interest it receives on non-U.S. investments, (ii) transactions in those investments and (iii) the repatriation of proceeds generated from the sale of those investments. Also, many non-U.S. markets require a license for the Fund to invest directly in those markets, and the Fund is subject to the risk that it could not invest if its license were terminated or suspended. In some non-U.S. markets, prevailing custody and trade settlement practices (e.g., the requirement to pay for securities prior to receipt) expose the Fund to credit and other risks with respect to participating brokers, custodians, clearing banks or other clearing agents, escrow agents and issuers. Further, adverse changes in investment regulations, capital requirements or exchange controls could adversely affect the value of the Fund's investments. These and other risks (e.g., nationalization, expropriation or other confiscation of assets of non-U.S. issuers) tend to be greater for investments in companies tied economically to emerging countries, the economies of which tend to be more volatile than the economies of developed countries.

**Options Risk.** The market price of options written by an underlying fund will be affected by many factors, including changes in the market price or dividend rates of underlying securities (or in the case of indices, the securities comprising such indices); changes in interest rates or exchange rates; changes in the actual or perceived volatility of the relevant stock market and underlying securities; and the time remaining before an option's expiration.

**Real Estate Risk.** To the extent an underlying fund concentrates its assets in real estate-related investments, the value of its portfolio is subject to factors affecting the real estate industry and may fluctuate more than the value of a portfolio that consists of securities of companies in a broader range of industries.

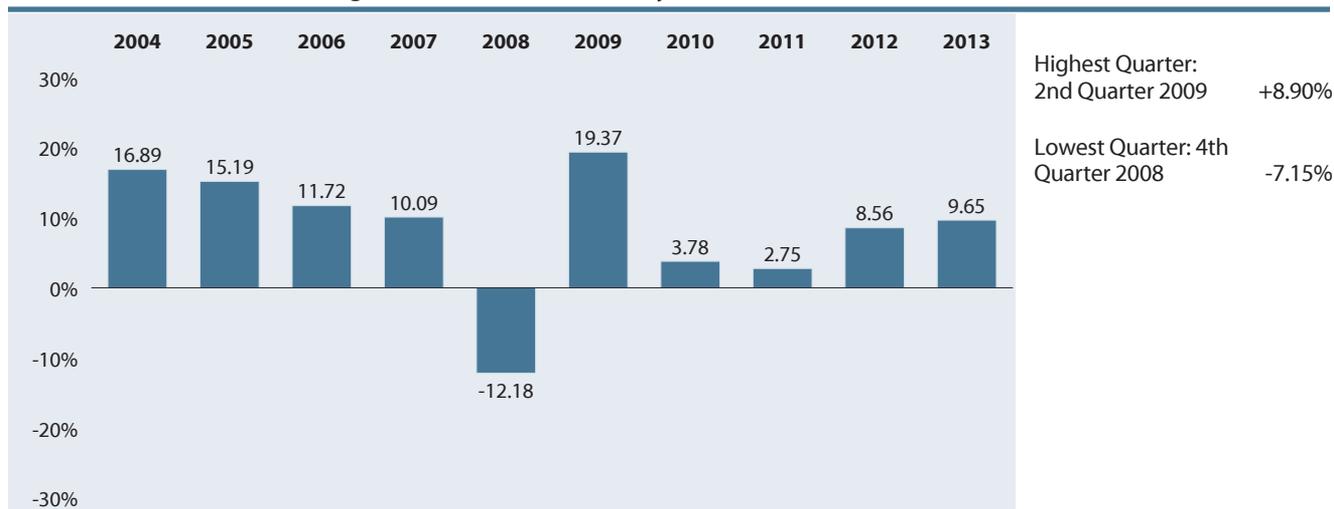

**Short Sales Risk.** The Fund runs the risk that an underlying fund's loss on a short sales of securities that the underlying Fund does not own is unlimited.

**Smaller Company Risk.** Smaller companies may have limited product lines, markets or financial resources, may lack the competitive strength of larger companies, or may lack managers with experience or depend on a few key employees. The securities of companies with smaller market capitalizations often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalization.

## Performance

The following information provides some indication of the risks of investing in the Fund by showing changes in the Fund's performance from year to year. The Fund's average annual total returns are compared to the performance of one or more indices. Past performance before and after taxes is no guarantee of future results. Current month-end performance is available on the Fund's Web site at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com).

### Calendar Year Total Returns for Class A as of 12/31 each year (Returns do not reflect sales charges and would be lower if they did)<sup>1</sup>

### Average Annual Total Returns for the periods ended 12/31/2013 (Returns reflect applicable sales charges)<sup>1</sup>

	Inception Date of Share Class	1 Year	5 Year	10 Year
Class A (before taxes)	3/1/2012	3.34%	7.39%	7.58%
Class A (after taxes on distributions)	3/1/2012	2.69%	6.73%	5.49%
Class A (after taxes on distributions and the sale of Fund Shares)	3/1/2012	1.89%	5.53%	5.41%
Class C (before taxes)	3/1/2012	7.91%	7.85%	7.41%
Consumer Price Index (reflects no deduction for fees, expenses, or taxes)		1.50%	2.08%	2.37%
MSCI World Index (Net) (reflects no deduction for fees, expenses, or taxes)		26.68%	15.02%	6.98%
Barclays U.S. TIPS 1-10 Year Index (reflects no deduction for fees, expenses, or taxes)		-5.58%	4.95%	4.37%

1. Historical performance shown for Class A and Class C prior to their inception is based on the performance of the Class III shares of Benchmark-Free Allocation Fund, in which the Fund invests substantially all of its investable assets. Returns for the Class III shares do not reflect Benchmark-Free Allocation Fund's current fee arrangement and have been adjusted downward to reflect the higher expense ratios applicable to Class A and Class C at their inception. These ratios were 1.66% for Class A and 2.41% for Class C.

After-tax returns are calculated using the historical highest individual federal marginal income tax rates and do not reflect the impact of state, local or foreign taxes. Actual after-tax returns depend on an investor's tax situation and may differ from those shown, and after-tax returns shown are not relevant to tax-exempt investors or investors who hold their Fund shares through tax-deferred arrangements, such as 401(k) Plans or Individual Retirement Accounts. After-tax returns are shown only for the Class A shares. After-tax returns for the Class C shares will vary.

## Fund Management

Investment Adviser	Portfolio Manager <sup>1</sup> , Title/Managed Since
Wells Fargo Funds Management, LLC	<b>Ben Inker, CFA</b> , Portfolio Manager/2012 <b>Sam Wilderman, CFA</b> , Portfolio Manager/2012

1. The Fund invests substantially all of its investable assets directly in Benchmark-Free Allocation Fund, for which GMO serves as investment adviser. Mr. Inker, a member of GMO, has been responsible for coordinating the portfolio management of Benchmark-Free Allocation Fund since 2003. Mr. Wilderman, a member of GMO, has been responsible for coordinating the portfolio management of Benchmark-Free Allocation Fund since 2012.

## Purchase and Sale of Fund Shares

In general, you can buy or sell shares of the Fund by mail, internet, phone or wire on any day the New York Stock Exchange is open for regular trading. You also may buy and sell shares through a financial professional.

Minimum Investments	To Buy or Sell Shares
<b>Minimum Initial Investment</b> Regular Accounts: \$1,000 IRAs, IRA Rollovers, Roth IRAs: \$250 UGMA/UTMA Accounts: \$50 Employer Sponsored Retirement Plans: No Minimum	<b>Mail:</b> <i>Wells Fargo Advantage Funds</i> P.O. Box 8266 Boston, MA 02266-8266 <b>Internet:</b> wellsfargoadvantagefunds.com <b>Phone or Wire:</b> 1-800-222-8222
<b>Minimum Additional Investment</b> Regular Accounts, IRAs, IRA Rollovers, Roth IRAs: \$100 UGMA/UTMA Accounts: \$50 Employer Sponsored Retirement Plans: No Minimum	<b>Contact your financial professional.</b>

## Tax Information

Any distributions you receive from the Fund may be taxable as ordinary income or capital gains, except when your investment is in an IRA, 401(k) or other tax advantaged investment plan. However, subsequent withdrawals from such a tax advantaged investment plan may be subject to federal income tax. You should consult your tax adviser about your specific tax situation.

## Payments to Broker-Dealers and Other Financial Intermediaries

If you purchase a Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Consult your salesperson or visit your financial intermediary's Web site for more information.

# Key Fund Information

---

This Prospectus contains information about the Fund within the *Wells Fargo Advantage Funds*<sup>®</sup> family and is designed to provide you with important information to help you with your investment decisions. Please read it carefully and keep it for future reference.

In this Prospectus, "we" generally refers to Wells Fargo Funds Management, LLC (Funds Management) or the portfolio managers. "We" may also refer to the Fund's other service providers. "You" refers to the shareholder or potential investor.

---

## Investment Objective and Principal Investment Strategies

The investment objective of the Fund in this Prospectus is non-fundamental; that is, it can be changed by a vote of the Board of Trustees alone. The objective and strategies description for the Fund tells you:

- what the Fund is trying to achieve; and
- how we intend to invest your money.

This section also provides a summary of the Fund's principal investment policies and practices. Unless otherwise indicated, these investment policies and practices apply on an ongoing basis.

## Principal Risk Factors

This section lists the principal risk factors for the Fund. A complete description of these and other risks is found in the "Description of Principal Investment Risks" section. It is possible to lose money by investing in the Fund.

# Absolute Return Fund

<b>Investment Adviser</b>	Wells Fargo Funds Management, LLC	
<b>Portfolio Manager</b>	Ben Inker, CFA; Sam Wilderman, CFA <sup>1</sup>	
<b>Fund Inception:</b>	March 1, 2012	
<b>Class A</b>	Ticker: WARAX	Fund Number: 3355
<b>Class C</b>	Ticker: WARCX	Fund Number: 3552

1. The Fund invests substantially all of its investable assets directly in Benchmark-Free Allocation Fund, for which GMO serves as investment adviser. Mr. Inker, a member of GMO, has been responsible for coordinating the portfolio management of Benchmark-Free Allocation Fund since 2003. Mr. Wilderman, a member of GMO, has been responsible for coordinating the portfolio management of Benchmark-Free Allocation Fund since 2012.

## Investment Objective

The Fund seeks a positive total return.

The Fund's Board of Trustees can change this investment objective without a shareholder vote.

## Principal Investment Strategies

The Fund is a diversified investment that invests substantially all of its investable assets in the GMO Benchmark-Free Allocation Fund (the "Benchmark-Free Allocation Fund"), an investment company managed by Grantham, Mayo, Van Otterloo & Co. LLC ("GMO"). GMO seeks to achieve Benchmark-Free Allocation Fund's investment objective by investing in asset classes that GMO believes offer the most attractive return and risk opportunities. The asset classes include:

- U.S. and foreign equity, including emerging markets;
- U.S. and foreign fixed income, including emerging markets; and
- alternative asset classes, including real estate and commodities.

GMO uses multi-year forecasts of returns and risk for asset classes to determine Benchmark-Free Allocation Fund's allocations. The factors considered and investment methods used by GMO can change over time.

Benchmark-Free Allocation Fund is structured as a fund of funds and gains its investment exposures primarily by investing in the GMO Implementation Fund. In addition, Benchmark-Free Allocation Fund may invest in other GMO Funds (together with GMO Implementation Fund, the "underlying funds"), principally GMO Alpha Only Fund, GMO Debt Opportunities Fund, GMO Alternative Asset Opportunity Fund and GMO Emerging Country Debt Fund. GMO Implementation Fund is permitted to invest in any asset class. Benchmark-Free Allocation Fund also may invest in securities or derivatives directly.

Benchmark-Free Allocation Fund seeks annualized excess returns of 5% (net of Benchmark-Free Allocation Fund fees) above the Consumer Price Index, with annualized volatility of 5-10%, over a complete market cycle. GMO does not manage Benchmark-Free Allocation Fund to, or control Benchmark-Free Allocation Fund's risk relative to, any securities index or securities benchmark.

Benchmark-Free Allocation Fund is permitted to invest (through GMO Implementation Fund, another underlying fund or directly) in any asset class, country, or sector and at times may have substantial exposure to a single asset class, country, or sector. In addition, Benchmark-Free Allocation Fund is not restricted in its exposure to any particular market and may invest in securities of companies of any market capitalization. Benchmark-Free Allocation Fund may have indirect exposure to derivatives and short sales through its investment in GMO Implementation Fund and other underlying funds. GMO's ability to shift investments within GMO Implementation Fund and between it and other underlying funds is not subject to any limits.

Benchmark-Free Allocation Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.

While the Fund invests substantially all of its investable assets in the Benchmark-Free Allocation Fund, the Fund may hold cash for short periods of time in order to mitigate the expenses associated with the purchase and sale of shares of the Benchmark-Free Allocation Fund.

Benchmark-Free Allocation Fund may, from time to time, take temporary defensive positions. To the extent Benchmark-Free Allocation Fund takes a temporary defensive position or otherwise holds cash, cash equivalents, or high quality debt investments on a temporary basis, it may not achieve its investment objective.

## Principal Risk Factors

Because the Fund invests all of its investable assets in Benchmark-Free Allocation Fund, which, in turn, invests all of its assets in a number of underlying funds, the following principal risks are those risks that result from the Fund's indirect investments in the underlying funds or direct investment in Benchmark-Free Allocation Fund.

The Fund is primarily subject to the risks mentioned below.

- Commodities Risk
- Counterparty Risk
- Credit Risk
- Currency Risk
- Derivatives Risk
- Focused Investment Risk
- Fund of Funds Risk
- Large Shareholder Risk
- Leveraging Risk
- Liquidity Risk
- Management and Operational Risk
- Market Disruption and Geopolitical Risk
- Market Risk - Asset-Backed Securities
- Market Risk - Equities
- Market Risk - Fixed Income Investments
- Natural Resources Risk
- Non-Diversified Funds Risk
- Non-U.S. Investment Risk
- Options Risk
- Real Estate Risk
- Short Sales Risk
- Smaller Company Risk

These and other risks could cause you to lose money in your investment in the Fund and could adversely affect the Fund's net asset value, yield and total return. These risks are described in the "Description of Principal Investment Risks" section.

# Description of Principal Investment Risks

---

Understanding the risks involved in mutual fund investing will help you make an informed decision that takes into account your risk tolerance and preferences. The factors that are most likely to have a material effect on a particular Fund as a whole are called "principal risks."

Because the Fund invests all of its investable assets in Benchmark-Free Allocation Fund, which, in turn, invests all of its assets in a number of underlying funds, the following principal risks are those risks that result from the Fund's indirect investments in the underlying funds or direct investment in Benchmark-Free Allocation Fund. In this section, references to the Fund should be read to include the Fund, Benchmark-Free Allocation Fund and the underlying funds, as appropriate.

The Fund's performance will not correlate perfectly with that of Benchmark-Free Allocation Fund due to the impact of the Fund's fees and expenses and to the timing and magnitude of cash flows into and out of the Fund which will create cash balances that cause the Fund's performance to deviate from the performance of the Benchmark-Free Allocation Fund.

The principal risks for the Fund have been previously identified and are described below. Additional information about the principal risks is included in the Statement of Additional Information ("SAI").

## **Commodities Risk**

The net asset value of the shares of a Fund that has significant exposure to commodities markets is affected by factors particular to those markets and may decline and fluctuate in a rapid and unpredictable manner. Commodity prices can be extremely volatile and are affected by many factors, including changes in overall market movements, real or perceived inflationary trends, commodity index volatility, changes in interest rates or currency exchange rates, population growth and changing demographics, nationalization, expropriation, or other confiscation, international regulatory, political and economic developments (e.g., regime changes and changes in economic activity levels), and developments affecting a particular industry or commodity, such as drought, floods or other weather conditions, livestock disease, trade embargoes, competition from substitute products, transportation bottlenecks or shortages, fluctuations in supply and demand, and tariffs. In addition, to the extent the Fund invests in commodity-related derivatives, the value of these derivatives may fluctuate more than the commodity or commodities or commodity index to which they relate.

## **Counterparty Risk**

Funds that enter into contracts with counterparties, such as repurchase or reverse repurchase agreements or over-the-counter ("OTC") derivatives contracts, or that lend their securities run the risk that the counterparty will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. If a counterparty fails to meet its contractual obligations, goes bankrupt, or otherwise experiences a business interruption, the Fund could miss investment opportunities or otherwise hold investments it would prefer to sell, resulting in losses for the Fund. The Fund is not subject to any limits on its exposure to any one counterparty nor to a requirement that counterparties maintain a specific rating by a nationally recognized rating organization to be considered for potential transactions. To the extent that GMO's view with respect to a particular counterparty changes (whether due to external events or otherwise), existing transactions are not required to be terminated or modified. Additionally, new transactions may be entered into with a counterparty that is no longer considered eligible if the transaction is primarily designed to reduce the overall risk of potential exposure to that counterparty (for example, re-establishing the transaction with a lesser notional amount). Counterparty risk is pronounced during unusually adverse market conditions and is particularly acute in environments (like those of 2008) in which financial services firms are exposed to systemic risks of the type evidenced by the insolvency of Lehman Brothers and subsequent market disruptions.

Participants in OTC derivatives markets typically are not subject to the same level of credit evaluation and regulatory oversight as are members of exchange-based markets, and, therefore, OTC derivatives generally expose the Fund to greater counterparty risk than exchange-traded derivatives. The Fund is subject to the risk that a counterparty will not settle a derivative in accordance with its terms because of a dispute over the terms of the contract (whether or not bona fide) or because of a credit or liquidity problem. If a counterparty's obligation to the Fund is not collateralized, then the Fund is essentially an unsecured creditor of the counterparty. If a counterparty defaults, the Fund will have contractual remedies, but the Fund may be unable to enforce them, thus causing the Fund to suffer a loss. Counterparty risk is greater for derivatives with longer maturities because of the longer time that events may occur that prevent settlement. Counterparty risk also is greater when the Fund has concentrated its derivatives with a single or small group of counterparties as it sometimes does as a result of its use of swaps and other OTC derivatives. Significant exposure to a single counterparty increases the Fund's counterparty risk. Funds that use swap contracts are subject, in particular, to the

creditworthiness of the counterparties because some types of swap contracts have durations longer than six months (and, in some cases, decades). The creditworthiness of a counterparty may be adversely affected by greater than average volatility in the markets, even if the counterparty's net market exposure is small relative to its capital. Counterparty risk still exists even if a counterparty's obligations are secured by collateral because the Fund's interest in the collateral may not be perfected or additional collateral may not be promptly posted as required.

The Fund is also subject to counterparty risk because it executes its securities transactions through brokers and dealers. If a broker or dealer fails to meet its contractual obligations, goes bankrupt, or otherwise experiences a business interruption, the Fund could miss investment opportunities or be unable to dispose of investments it would prefer to sell, resulting in losses for the Fund.

Counterparty risk with respect to derivatives will be affected by new rules and regulations affecting the derivatives market. As described under "Derivatives Risk" below, some derivatives transactions are required to be centrally cleared, and a party to a cleared derivatives transaction is subject to the credit risk of the clearing house and the clearing member through which it holds its cleared position, rather than the credit risk of its original counterparty to the derivatives transaction. Credit risk of market participants with respect to derivatives that are centrally cleared is concentrated in a few clearing houses, and it is not clear how an insolvency proceeding of a clearing house would be conducted and what impact an insolvency of a clearing house would have on the financial system. A clearing member is obligated by contract and by applicable regulation to segregate all funds received from customers with respect to cleared derivatives transactions from the clearing member's proprietary assets. However, all funds and other property received by a clearing member from its customers with respect to cleared derivatives are generally held by the clearing member on a commingled basis in an omnibus account, and the clearing member may invest those funds in certain instruments permitted under the applicable regulations. Therefore, the Fund might not be fully protected in the event of the bankruptcy of the Fund's clearing member because the Fund would be limited to recovering only a pro rata share of all available funds segregated on behalf of the clearing member's customers for a relevant account class. Also, the clearing member is required to transfer to the clearing house the amount of margin required by the clearing house for cleared derivatives, which amounts are generally held in an omnibus account at the clearing house for all customers of the clearing member. Regulations promulgated by the Commodities Futures Trading Commission require that the clearing member notify the clearing house of the initial margin provided by the clearing member to the clearing house that is attributable to each customer. However, if the clearing member does not accurately report the Fund's initial margin, the Fund is subject to the risk that a clearing house will use the Fund's assets held in an omnibus account at the clearing house to satisfy payment obligations of a defaulting customer of the clearing member to the clearing house. In addition, clearing members generally provide the clearing house the net amount of variation margin required for cleared swaps for all of its customers in the aggregate, rather than individually for each customer. The Fund is therefore subject to the risk that a clearing house will not make variation margin payments owed to the Fund if another customer of the clearing member has suffered a loss and is in default, and the risk that the Fund will be required to provide additional variation margin to the clearing house before the clearing house will move the Fund's cleared derivatives transactions to another clearing member. In addition, if a clearing member does not comply with the applicable regulations or its agreement with the Fund, or in the event of fraud or misappropriation of customer assets by a clearing member, the Fund could have only an unsecured creditor claim in an insolvency of the clearing member with respect to the margin held by the clearing member.

### **Credit Risk**

This is the risk that the issuer or guarantor of a fixed income investment or the obligor of an obligation underlying an asset-backed security will be unable or unwilling to satisfy its obligations to pay principal and interest or otherwise to honor its obligations in a timely manner. The market price of a fixed income investment will normally decline as a result of the issuer's, guarantor's, or obligor's failure to meet its payment obligations or the downgrading of its credit rating. This risk is particularly acute in environments (like those of 2008) in which financial services firms are exposed to systemic risks of the type evidenced by the insolvency of Lehman Brothers and subsequent market disruptions.

All fixed income securities are subject to credit risk. Financial strength and solvency of an issuer are the primary factors influencing credit risk. The risk varies depending upon whether the issuer is a corporation or U.S. or non-U.S. government (or sub-division or instrumentality) and whether the particular security has a priority over other obligations of the issuer in payment of principal and interest and whether it has any collateral backing or credit enhancement. Credit risk may change over the life of a fixed income security. U.S. government securities are subject to varying degrees of credit risk depending upon whether the securities are supported by the full faith and credit of the United States, supported by the ability to borrow from the U.S. Treasury, supported only by the credit of the issuing U.S. government agency, instrumentality, or corporation, or otherwise supported by the United States. For example, issuers of many types of U.S. government securities (e.g., the Federal Home Loan Mortgage Corporation ("Freddie Mac"), Federal National Mortgage Association ("Fannie Mae"), and Federal Home Loan Banks), although chartered or sponsored by Congress, are not

funded by Congressional appropriations and their fixed income securities, including mortgage-backed and other asset-backed securities, are neither guaranteed nor insured by the U.S. government. These securities are subject to more credit risk than U.S. government securities that are supported by the full faith and credit of the United States (e.g., U.S. Treasury bonds). Investments in sovereign debt involve the risk that the governmental entities responsible for repayment may be unable or unwilling to pay interest and repay principal when due. A governmental entity's willingness or ability to pay interest and repay principal in a timely manner may be affected by a variety of factors, including its cash flow, the size of its reserves, its access to foreign exchange, the relative size of its debt service burden to its economy as a whole, and political constraints. In addition, payment of principal of fixed income securities guaranteed by the U.S. government can be delayed because the guarantee generally only requires payment upon maturity of the securities. Investments in quasi-sovereign issuers are subject to the additional risk that the issuer may default independently of its sovereign. Sovereign debt risk is greater for fixed income securities issued or guaranteed by emerging countries.

In some cases, the credit risk of a fixed income security is reflected in its credit ratings, and a Fund holding such a security is subject to the risk that its rating will be downgraded.

Securities issued by the U.S. Treasury historically have presented minimal credit risk. However, recent events have led to a downgrade in the long-term U.S. credit rating by at least one major rating agency and have introduced greater uncertainty about the ability of the U.S. to repay its obligations. A further credit rating downgrade or a U.S. credit default could decrease the value and increase the volatility of the Fund's investments.

As described under "Market Risk - Asset-Backed Securities" below, asset-backed securities may be backed by many types of assets and their payment of interest and repayment of principal largely depend on the cash flows generated by the assets backing them. The credit risk of a particular asset-backed security depends on many factors, as described in "Market Risk - Asset-Backed Securities" below.

The obligations of issuers also are subject to bankruptcy, insolvency and other laws affecting the rights and remedies of creditors. The Fund also is exposed to credit risk on a reference security to the extent it writes protection under credit default swaps. See "Derivatives Risk" below for more information regarding risks associated with the use of credit default swaps.

The extent to which the market price of a fixed income security changes in response to a credit event depends on a number of factors and can be difficult to predict. For example, floating rate securities may have final maturities of ten or more years, but their effective durations will tend to be very short. If the issuer of floating rate securities experiences an adverse credit event, or a change occurs in its perceived creditworthiness, the market price of its securities could decline much more than would be predicted by a change in their yield relative to their effective duration.

Credit risk is particularly pronounced for below investment grade securities (commonly referred to as "junk bonds"). The sovereign debt of many non-U.S. governments, including their sub-divisions and instrumentalities, is below investment grade. Many asset-backed securities also are below investment grade. Below investment grade securities have speculative characteristics, often are less liquid than higher quality securities, present a greater risk of default and are more susceptible to real or perceived adverse industry conditions. In the event of default of sovereign debt, the Fund may be unable to pursue legal action against the sovereign issuer.

### **Currency Risk**

Currency risk is the risk that fluctuations in exchange rates will adversely affect the market value of the Fund's investments. Currency risk includes the risk that the non-U.S. currencies in which the Fund's investments are traded, in which the Fund receives income, or in which the Fund has taken a position, will decline in value relative to the U.S. dollar. Currency risk also includes the risk that the currency to which the Fund has obtained exposure through hedging declines in value relative to the currency being hedged, in which event the Fund may realize a loss both on the hedging instrument and on the currency being hedged. Currency exchange rates can fluctuate significantly for many reasons, including changes in supply and demand in the currency exchange markets, trade balances, actual or perceived changes in interest rates, differences in relative values of similar assets in different currencies, long-term opportunities for investment and capital appreciation, intervention (or the failure to intervene) by governments, central banks or supranational agencies such as the International Monetary Fund, and currency or exchange controls or other political and economic developments in the U.S. or abroad. See "Market Disruption and Geopolitical Risk" below.

Many of the underlying funds use derivatives to take overweighted or underweighted currency positions relative to the currency exposure of their portfolios. As a result, their currency exposure may differ (in some cases significantly) from the currency exposure of their benchmarks. If the exchange rates of the currencies involved do not move as expected, the Fund could lose money on its holdings of a particular currency and on the derivative. See also "Non-U.S. Investment Risk" below.

Some currencies are illiquid (e.g., some emerging country currencies), and the underlying fund may not be able to convert them into U.S. dollars, in which case GMO may decide to purchase U.S. dollars in a parallel market in which the exchange rate is materially and adversely different. Exchange rates for many currencies (e.g., some emerging country currencies) are particularly affected by exchange control regulations.

Derivative transactions in non-U.S. currencies (such as futures, forwards, options and swaps) may involve leveraging risk in addition to currency risk, as described below under "Leveraging Risk." In addition, the obligations of counterparties in currency derivative transactions are often not secured by collateral, which increases counterparty risk (see "Counterparty Risk" above).

### **Derivatives Risk**

The Fund may invest in derivatives, which are financial contracts whose value depends on, or is derived from, the value of underlying assets, reference rates or indices. Derivatives involve the risk that changes in their value may not move as expected relative to the value of the assets, rates, or indices they are designed to track. Derivatives include futures, non-U.S. currency contracts, swap contracts, reverse repurchase agreements and other OTC contracts. Derivatives may relate to securities, interest rates, currencies or currency exchange rates, inflation rates, commodities and indices. The SAI contains a description of the various types and uses of derivatives in the Fund's investment strategies.

The use of derivatives involves risks that are in addition to, and potentially greater than, the risks of investing directly in securities and other more traditional assets. In particular, the use of OTC derivatives exposes the Fund to the risk that the counterparties will be unable or unwilling to make timely settlement payments or otherwise honor its obligations. An OTC derivatives contract typically can be closed only with the consent of the other party to the contract. If the counterparty defaults, the Fund will have contractual remedies but may not be able to enforce them. Because the contract for each OTC derivative is individually negotiated, the counterparty may interpret contractual terms (e.g., the definition of default) differently than the Fund, and if it does, the Fund may decide not to pursue its claims against the counterparty to avoid incurring the cost and unpredictability of legal proceedings. The Fund, therefore, may be unable to obtain payments GMO believes are owed to it under OTC derivatives contracts, or those payments may be delayed or made only after the Fund has incurred the costs of litigation.

The Fund may invest in derivatives that (i) do not require the counterparty to post collateral (e.g., non-U.S. currency forwards), (ii) require collateral but that do not provide for the Fund's security interest in it to be perfected, (iii) require a significant upfront deposit by the Fund unrelated to the derivative's intrinsic value, or (iv) do not require the collateral to be regularly marked-to-market. When a counterparty's obligations are not fully secured by collateral, the Fund runs the risk of having limited recourse if the counterparty defaults. Even when obligations are required by contract to be collateralized, the Fund often will not receive the collateral the day the collateral is called for.

The Fund may invest in derivatives with a limited number of counterparties, and events affecting the creditworthiness of any of those counterparties may have a pronounced effect on the Fund. Derivatives risk is particularly acute in environments (like those of 2008) in which financial services firms are exposed to systemic risks of the type evidenced by the insolvency of Lehman Brothers and subsequent market disruptions. In addition, during those periods, the Fund may have a greater need for cash to provide collateral for large swings in its mark-to-market obligations under the derivatives in which it has invested.

Derivatives also present risks described elsewhere in this "Description of Principal Investment Risks" section, including market risk, liquidity risk, currency risk, credit risk and counterparty risk. Many derivatives, in particular OTC derivatives, are complex and their valuation often requires modeling and judgment, which increases the risk of mispricing or improper valuation. The pricing models used may not produce valuations that are consistent with the values the Fund realizes when it closes or sells an OTC derivative. Valuation risk is more pronounced when the Fund enters into OTC derivatives with specialized terms because the value of those derivatives in some cases is determined only by reference to similar derivatives with more standardized terms. As a result, incorrect valuations may result in increased cash payments to counterparties, under-collateralization and/or errors in the calculation of the Fund's net asset value.

The Fund's use of derivatives may not be effective or have the desired results. Moreover, suitable derivatives will not be available in all circumstances. For example, the economic costs of taking some derivative positions may be prohibitive, and if a counterparty or its affiliate is deemed to be an affiliate of the Fund, the Fund will not be permitted to trade with that counterparty. In addition, GMO may decide not to use derivatives to hedge or otherwise reduce an underlying fund's risk exposures, potentially resulting in losses for the underlying fund.

Swap contracts and other OTC derivatives are highly susceptible to liquidity risk (see "Liquidity Risk" below) and counterparty risk (see "Counterparty Risk" above), and are subject to documentation risks. Because many derivatives have a leverage component (i.e., a notional value in excess of the assets needed to establish and/or maintain the derivative

position), adverse changes in the value or level of the underlying asset, rate or index may result in a loss substantially greater than the amount invested in the derivative itself. See "Leveraging Risk" below.

The Fund's use of derivatives may be subject to special tax rules and could generate additional taxable income for shareholders.

The U.S. government recently enacted legislation that provides for new regulation of the derivatives market, including clearing, margin, reporting and registration requirements. Because the legislation leaves much to rule making (and many of the rules are not yet final), its ultimate impact remains unclear.

Under recently adopted rules and regulations, transactions in some types of swaps (including interest rate swaps and credit default swaps on North American and European indices) are required to be centrally cleared. In a transaction involving those swaps ("cleared derivatives"), the Fund's counterparty is a clearing house, rather than a bank or broker. Since the Fund is not a member of a clearing house and only members of a clearing house ("clearing members") can participate directly in the clearing house, the Fund will hold cleared derivatives through accounts at clearing members. In cleared derivatives transactions, the Fund will make payments (including margin payments) to and receive payments from a clearing house through their accounts at clearing members. Clearing members guarantee performance of their clients' obligations to the clearing house.

In many ways, cleared derivative arrangements are less favorable to mutual funds than bilateral arrangements. For example, the Fund may be required to provide more margin for cleared derivatives transactions than for bilateral derivatives transactions. Also, in contrast to a bilateral derivatives transaction, following a period of notice to the Fund, a clearing member generally can require termination of an existing cleared derivatives transaction at any time or an increase in margin requirements above the margin that the clearing member required at the beginning of a transaction. Clearing houses also have broad rights to increase margin requirements for existing transactions or to terminate those transactions at any time. Any increase in margin requirements or termination of existing cleared derivatives transactions by the clearing member or the clearing house could interfere with the ability of the Fund to pursue its investment strategy. Further, any increase in margin requirements by a clearing member could expose the Fund to greater credit risk to its clearing member, because (as described under "Counterparty Risk" above) margin for cleared derivatives transactions in excess of a clearing house's margin requirements typically is held by the clearing member. Also, the Fund is subject to risk if it enters into a derivatives transaction that is required to be cleared (or that GMO expects to be cleared), and no clearing member is willing or able to clear the transaction on the Fund's behalf. While the documentation in place between the Fund and its clearing members generally provides that the clearing members will accept for clearing all cleared derivatives transactions that are within credit limits (specified in advance) for the Fund, the Fund is still subject to the risk that no clearing member will be willing or able to clear a transaction. In those cases, the transaction might have to be terminated, and the Fund could lose some or all of the benefit of the transaction, including loss of an increase in the value of the transaction and/or loss of hedging protection. In addition, the documentation governing the relationships between the Fund and clearing members is drafted by the clearing members and generally is less favorable to the Fund than typical bilateral derivatives documentation. For example, documentation relating to cleared derivatives generally includes a one-way indemnity by the Fund in favor of the clearing member for losses the clearing member incurs as the Fund's clearing member and typically does not provide the Fund any remedies if the clearing member defaults or becomes insolvent.

These and other new rules and regulations could, among other things, further restrict the Fund's ability to engage in, or increase the cost to the Fund of, derivatives transactions, for example, by making some types of derivatives no longer available to the Fund, increasing margin or capital requirements, or otherwise limiting liquidity or increasing transaction costs. These regulations are new and evolving, so their potential impact on the Fund and the financial system are not yet known. While the new regulations and central clearing of some derivatives transactions are designed to reduce systemic risk (i.e., the risk that the interdependence of large derivatives dealers could cause them to suffer liquidity, solvency or other challenges simultaneously), there is no assurance that the new clearing mechanisms will achieve that result, and in the meantime, as noted above, central clearing exposes the Fund to new kinds of risks and costs.

### **Focused Investment Risk**

A Fund whose investments are focused in particular countries, regions, sectors, companies or industries with high positive correlations to one another (e.g., different industries within broad sectors, such as technology or financial services) or in securities from issuers with high positive correlations to one another (such as GMO U.S. Treasury Fund's investments in securities issued by the U.S. Treasury and other fixed income securities that are backed by the full faith and credit of the U.S. government), is subject to greater overall risk than a fund whose investments are more diversified. A Fund that invests in the securities of a limited number of issuers is particularly exposed to adverse developments affecting those issuers, and a decline in the market price of a particular security held by the Fund is likely to affect the Fund's performance more than if the Fund invested in the securities of a larger number of issuers.

A Fund that focuses its investments in a particular type of security or sector, or in securities of companies in a particular industry, is vulnerable to events affecting those securities, sectors or companies. Securities, sectors or companies that share common characteristics are often subject to similar business risks and regulatory burdens, and often react similarly to specific economic, market, political or other developments. See also "Real Estate Risk" below.

Similarly, a Fund that invests a significant portion of its assets in investments tied economically to (or related to) a particular geographic region, non-U.S. country (e.g., Taiwan or Japan) or particular market (e.g., emerging markets) has more exposure to regional and country economic risks than a fund making non-U.S. investments throughout the world. The political and economic prospects of one country or group of countries within the same geographic region may affect other countries in that region, and a recession, debt crisis, or decline in currency valuation in one country can spread to other countries. Furthermore, companies in a particular geographic region or country are vulnerable to events affecting other companies in that region or country because they often share common characteristics, are exposed to similar business risks and regulatory burdens, and react similarly to specific economic, market, political or other developments. See also "Non-U.S. Investment Risk" below.

### **Fund of Funds Risk**

A Fund that invests in shares of other investment companies, including other GMO Funds, money market funds and ETFs (for purposes of this risk disclosure, "underlying Funds"), is exposed to the risk that the underlying Funds will not perform as expected.

Because the Fund bears the fees and expenses of the underlying Funds in which it invests (absent reimbursement of those expenses), the Fund will incur additional expenses when investing in underlying Funds. In addition, total Fund expenses will increase if the Fund makes a new or further investment in underlying Funds with higher fees or expenses than the average fees and expenses of the underlying Funds then in the Fund's portfolio.

The Fund also is indirectly exposed to all of the risks of an investment in the underlying Funds. Because some of its underlying Funds in turn invest a substantial portion of their assets in other GMO Funds (pursuant to an exemptive order obtained from the SEC), such funds have more tiers of investments than funds in many other groups of investment companies. A Fund that invests in shares of other GMO Funds is subject indirectly to Large Shareholder Risk because those other GMO Funds are more likely to have large shareholders (e.g., other GMO Funds). See "Large Shareholder Risk" below.

Investments in ETFs involve the risk that the ETF's performance may not track the performance of the index the ETF is designed to track. Unlike the index, an ETF incurs administrative expenses and transaction costs in trading securities. In addition, the timing and magnitude of cash inflows and outflows from and to investors buying and redeeming shares in the ETF could create cash balances that cause the ETF's performance to deviate from the index (which remains "fully invested" at all times). Performance of an ETF and the index it is designed to track also may diverge because the composition of the index and the securities held by the ETF may occasionally differ. In addition, ETFs often use derivatives to track the performance of the relevant index, and, therefore, investments in those ETFs are subject to the same derivatives risks discussed above.

### **Large Shareholder Risk**

To the extent that a large number of shares of a Fund is held by a single shareholder (e.g., an institutional investor or another GMO Fund) or a group of shareholders with a common investment strategy (e.g., GMO asset allocation accounts), the Fund is subject to the risk that a redemption by those shareholders of all or a large portion of their Fund shares will adversely affect the Fund's performance if it is forced to sell portfolio securities to raise the cash needed to satisfy the redemption request. In addition, GMO Funds and other accounts over which GMO has investment discretion that invest in the Funds are not subject to restrictions on the frequency of trading of Fund shares. GMO Asset Allocation Funds and separate accounts managed by GMO for its clients hold substantial percentages of the shares of many underlying funds, and asset allocation decisions by GMO may result in substantial redemptions from (or investments in) those underlying funds. These transactions may adversely affect the Fund's performance to the extent that the Fund is required to sell investments (or invest cash) at times when it would not otherwise do so. Redemptions of a large number of shares also may increase transaction costs or, by necessitating a sale of portfolio securities, accelerate the realization of taxable income and/or gains to shareholders. They also potentially limit the use of any capital loss carryforwards and certain other losses to offset future realized capital gains (if any). In addition, a Fund that invests in other GMO Funds subject to Large Shareholder Risk is indirectly subject to this risk.

### **Leveraging Risk**

The use of reverse repurchase agreements and other derivatives and securities lending creates leverage (i.e., the Fund's investment exposures exceed its net asset value). Leverage increases the Fund's losses when the value of its investments (including derivatives) declines. Because many derivatives have a leverage component (i.e., a notional value in excess of

the assets needed to establish or maintain the derivative position), adverse changes in the value or level of the underlying asset, rate or index may result in a loss substantially greater than the amount invested in the derivative itself. In the case of swaps, the risk of loss generally is related to a notional principal amount, even if the parties have not made any initial investment. Some derivatives have the potential for unlimited loss, regardless of the size of the initial investment. The Fund's use of reverse repurchase agreements also subjects it to interest costs based on the difference between the sale and repurchase price of the security involved. The Fund's portfolio also will be leveraged if it borrows money to meet redemption requests or settle investment transactions or if it exercises its right to delay payment on a redemption.

The Fund may manage some of its derivative positions by offsetting derivative positions against one another or against other assets. To the extent offsetting positions do not behave in relation to one another as expected, the Fund may perform as if it were leveraged.

### **Liquidity Risk**

Liquidity risk is the risk that low trading volume, lack of a market maker, large position size, or legal restrictions (including daily price fluctuation limits or "circuit breakers") limits or prevents the Fund from selling particular securities or unwinding derivative positions at desirable prices. In addition to these risks, the Fund is exposed to liquidity risk when it has an obligation to purchase particular securities (e.g., as a result of entering into reverse repurchase agreements, writing a put, or closing out a short position). A Fund with a principal investment strategy that involves investment in asset-backed securities, emerging country debt securities, securities of companies with smaller market capitalizations or smaller total float-adjusted market capitalizations, and emerging market securities is subject to the greatest liquidity risk. These types of investments can be difficult to value, exposing a Fund to the risk that the price at which it sells them will be less than the value placed on them when they were held by the Fund. In addition, TIPS have exhibited periods of greatly reduced liquidity when disruptions in fixed income markets have occurred, such as the events surrounding the bankruptcy of Lehman Brothers in 2008. Less liquid securities are more susceptible than other securities to price declines when market prices decline generally. An underlying GMO fund with a benchmark may buy securities that are less liquid than those in its benchmark.

### **Management and Operational Risk**

The Fund is subject to management risk because it relies on GMO's ability to achieve its investment objective. The Fund runs the risk that GMO's investment techniques will fail to produce desired results and cause the Fund to incur significant losses. GMO also may fail to use derivatives effectively, choosing to hedge or not to hedge positions at disadvantageous times.

As described in the Fund's summary, GMO's portfolio managers use quantitative analyses and models. Any imperfections, errors, or limitations in those analyses and models could affect the ability of the portfolio managers to implement a Fund's strategies. By necessity, these analyses and models make simplifying assumptions that limit their effectiveness. Models that appear to explain prior market data can fail to predict future market events. Further, the data used in models may be inaccurate or may not include the most recent information about a company or a security. The Fund also runs the risk that GMO's assessment of an investment may be wrong. There can be no assurance that key personnel of GMO will continue to be employed by GMO. The loss of their services could have an adverse impact on GMO's ability to achieve the Fund's investment objectives.

The Fund also is subject to the risk of loss as a result of other services provided by GMO and other service providers, including pricing, administrative, accounting, tax, legal, custody, transfer agency, and other services. Operational risk includes the possibility of loss caused by inadequate procedures and controls, human error, and system failures by a service provider. For example, trading delays or errors (both human and systematic) could prevent a Fund from benefiting from potential investment gains or avoiding losses on the security. GMO is not contractually liable to the Fund for losses associated with operational risk absent GMO's willful misfeasance, bad faith, gross negligence, or reckless disregard of its contractual obligations to provide services to the Fund. Other Fund service providers also have limitations on their liability to the Fund for losses resulting from their errors.

### **Market Disruption and Geopolitical Risk**

The Fund is subject to the risk that geopolitical and other events will disrupt securities markets, adversely affect global economies and markets and thereby decrease the value of the Fund's investments. The wars in Iraq and Afghanistan have had a substantial effect on the economies and securities markets of the U.S. and other countries. Terrorism in the U.S. and around the world has had a similar global impact and has increased geopolitical risk. The terrorist attacks on September 11, 2001 resulted in the closure of some U.S. securities markets for four days, and similar attacks are possible in the future. Securities markets may be susceptible to market manipulation (e.g., the potential manipulation of the London Interbank Offered Rate (LIBOR)) or other fraudulent trade practices, which could disrupt the orderly functioning of these markets or adversely affect the value of investments traded in these markets, including investments of the Fund. While the U.S.

government has honored its credit obligations continuously for the last 200 years, it remains possible that the U.S. could default on its obligations. While it is impossible to predict the consequences of such an unprecedented event, it is likely that a default by the U.S. would be highly disruptive to the U.S. and global securities markets and could significantly impair the value of the Fund's investments. Similarly, political events within the U.S. at times have resulted, and may in the future result, in a shutdown of government services, which could negatively affect the U.S. economy, decrease the value of many Fund investments, and increase uncertainty in or impair the operation of the U.S. or other securities markets. The uncertainty surrounding the sovereign debt of a significant number of European Union countries, as well as the continued existence of the European Union itself, have disrupted and may continue to disrupt markets in the U.S. and around the world. If one or more countries leave the European Union or the European Union dissolves, the world's securities markets likely will be significantly disrupted. Substantial government interventions (e.g., currency controls), also could negatively impact the Fund. War, terrorism, economic uncertainty, and related geopolitical events have led, and in the future may lead, to increased short-term market volatility and may have adverse long-term effects on U.S. and world economies and markets generally. Likewise, natural and environmental disasters, such as the earthquake and tsunami in Japan in early 2011, and systemic market dislocations of the kind surrounding the insolvency of Lehman Brothers in 2008, if repeated, would be highly disruptive to economies and markets, adversely affecting individual companies and industries, securities markets, interest rates, credit ratings, inflation, investor sentiment and other factors affecting the value of the Fund's investments. During such market disruptions, the Fund's exposure to the risks described elsewhere in this "Description of Principal Investment Risks" section will likely increase. Market disruptions, including sudden government interventions, can also prevent the Fund from implementing its investment programs for a period of time and achieving its investment objectives. For example, a market disruption may adversely affect the orderly functioning of the securities markets and may cause the Fund's derivatives counterparties to discontinue offering derivatives on some underlying commodities, securities, reference rates or indices, or to offer them on a more limited basis. To the extent that the Fund has focused its investments in the stock index of a particular region, adverse geopolitical and other events could have a disproportionate impact on the Fund.

*The Fund is subject to market risk, which is the risk that the market value of their holdings will decline. Market risks include Market Risk – Asset-Backed Securities, Market Risk – Equities, and Market Risk – Fixed Income Investments.*

### **Market Risk - Asset-Backed Securities**

Investments in asset-backed securities not only are subject to all of the market risks described below for fixed-income securities but to other market risks, as well.

To the extent the Fund invests in asset-backed securities, it is exposed to the risk that these securities experience severe credit downgrades, illiquidity, defaults and declines in market value. These risks are particularly acute during periods of adverse market conditions, such as those that occurred in 2008. Asset-backed securities may be backed by many types of assets, including pools of residential and commercial mortgages, automobile loans, educational loans, home equity loans, and credit-card receivables. They also may be backed by pools of corporate or sovereign bonds, bank loans made to corporations, or a combination of these bonds and loans (commonly referred to as "collateralized debt obligations" or "collateralized loan obligations") and by the fees earned by service providers.

As described under "Market Risk - Fixed Income Investments" below, the market price of fixed income investments with complex structures, such as asset-backed securities, can decline due to a number of factors, including market uncertainty about their credit quality and the reliability of their payment streams. Payment of interest on asset-backed securities and repayment of principal largely depend on the cash flow generated by the assets backing the securities, as well as the deal structure (e.g., determination as to the amount of underlying assets or other support needed to produce the cash flows necessary to service interest and make principal payments), the quality of the underlying assets, the level of credit support and the credit quality of the credit-support provider, if any, and the reliability of various other service providers with access to the payment stream. A problem in any one of these areas can lead to a reduction in the payment stream GMO expected the Fund to receive at the time the Fund purchased the asset-backed security. Asset-backed securities involve risk of loss of principal if obligors of the underlying obligations default and the value of the defaulted obligations exceeds whatever credit support the securities may have. Asset-backed securities backed by sub-prime mortgage loans, in particular, may cause the Fund to suffer significantly greater declines in value due to defaults, as sub-prime mortgage loans are typically made to less creditworthy borrowers and thus have a higher risk of default than conventional mortgage loans. The obligations of issuers (and obligors of asset-backed securities) also are subject to bankruptcy, insolvency and other laws affecting the rights and remedies of creditors. As of the date of this Prospectus, many asset-backed securities owned by the Fund that were once rated investment grade are now rated below investment grade. See "Credit Risk" above for more information about credit risk.

With the deterioration of worldwide economic and liquidity conditions that occurred and became acute in 2008, the markets for asset-backed securities became fractured, and uncertainty about the creditworthiness of those securities

(and underlying assets) caused credit spreads (the difference between yields on asset-backed securities and U.S. Government securities) to widen dramatically. Concurrently, systemic risks of the type evidenced by the insolvency of Lehman Brothers and subsequent market disruptions reduced the ability of financial institutions to make markets in many fixed income securities. These events reduced liquidity and contributed to substantial declines in the market prices of asset-backed and other fixed income securities. These conditions may occur again. Also, government actions and proposals affecting the terms of underlying home and consumer loans, changes in demand for products (e.g., automobiles) financed by those loans, and the inability of borrowers to refinance existing loans (e.g., sub-prime mortgages) have had, and may continue to have, adverse valuation and liquidity effects on asset-backed securities.

The market price of an asset-backed security may depend on the servicing of its underlying assets and is, therefore, subject to risks associated with the negligence or defalcation of its servicer. In some circumstances, the mishandling of related documentation also may affect the rights of security holders in and to the underlying assets. The insolvency of an entity that generated the assets underlying an asset-backed security is likely to result in a decline in the market price of that security, as well as costs and delays. The obligations underlying asset-backed securities, in particular securities backed by pools of residential and commercial mortgages, also are subject to unscheduled prepayment, and the Fund may be unable to invest prepayments at as high a yield as was provided by the asset-backed security. When interest rates rise, these obligations also may be repaid more slowly than anticipated, which could cause the market price of the Fund's investment to decrease.

The risk of investing in asset-backed securities has increased since the deterioration in worldwide economic and liquidity conditions referred to above because performance of the various sectors in which the assets underlying asset-backed securities are concentrated (e.g., auto loans, student loans, sub-prime mortgages, and credit card receivables) has become more highly correlated. See "Focused Investment Risk" above for more information about risks of investing in correlated sectors. A single financial institution may serve as a trustee for many asset-backed securities. As a result, a disruption in that institution's business may have a material impact on many investments.

### **Market Risk - Equities**

To the extent the Fund invests in equities, it runs the risk that the market prices of those investments will decline. The market prices of equities may decline for reasons that directly relate to the issuing company, such as poor management performance or reduced demand for its goods or services. They also may decline due to factors that affect a particular industry, such as a decline in demand, labor or raw material shortages or increased production costs. In addition, market prices may decline as a result of general market conditions not specifically related to a company or industry, such as real or perceived adverse economic conditions, changes in the general outlook for corporate earnings, changes in interest or currency rates, or adverse investor sentiment generally. Equities generally have significant price volatility, and the market prices of equities can decline in a rapid or unpredictable manner.

The Fund may invest a substantial portion of its assets in equities and, as a result, declines in stock market prices generally are likely to reduce the net asset values of the Fund's shares.

If an underlying fund purchases equities at a discount from their value as determined by GMO, that fund runs the risk that the market prices of these investments will not appreciate or will decline for a variety of reasons, one of which may be GMO's overestimation of the value of those investments.

The market prices of equities trading at high multiples of current earnings often are more sensitive to changes in future earnings expectations than the market prices of equities trading at lower multiples.

### **Market Risk - Fixed Income Investments**

To the extent the Fund invests in fixed income securities (including bonds, notes, bills, synthetic debt instruments, and asset-backed securities) it is subject to various market risks. The market price of a fixed income investment can decline due to a number of market-related factors, including rising interest rates and widening credit spreads, or decreased liquidity stemming from the market's uncertainty about the value of a fixed income investment (or class of fixed income investments). In addition, the market price of fixed income investments with complex structures, such as asset-backed securities and sovereign and quasi-sovereign debt instruments, can decline due to market uncertainty about their credit quality and the reliability of their payment streams. Some fixed income securities also are subject to unscheduled prepayment, and the Fund may be unable to invest prepayments at as high a yield as was provided by the fixed income security. When interest rates rise, these securities also may be repaid more slowly than anticipated, which could cause the market price of the Fund's investment to decrease. During periods of economic uncertainty and change, the market price of the Fund's investments in below investment grade securities (commonly referred to as "junk bonds") may be particularly volatile. Often junk bonds are subject to greater sensitivity to interest rate and economic changes than higher rated bonds and can be more difficult to value, exposing the Fund to the risk that the price at which it sells them will be

less than the value placed on them when they were held by the Fund. See "Credit Risk" and "Liquidity Risk" above for more information about these risks.

A principal risk run by the Fund with a significant investment in fixed income securities is that an increase in prevailing interest rates will cause the market price of those securities to decline. The risk associated with increases in interest rates (also called "interest rate risk") is generally greater for a Fund investing in fixed income securities with longer durations and in some cases duration can increase.

The extent to which a fixed income security's price changes with changes in interest rates is referred to as interest rate duration, which can be measured mathematically or empirically. A longer-maturity investment generally has longer interest rate duration because the investment's fixed rate is locked in for a longer period of time. Floating-rate or adjustable-rate securities, however, generally have shorter interest rate durations because their interest rates are not fixed but rather float up and down as interest rates change. Conversely, inverse floating-rate securities have durations that move in the opposite direction from short-term interest rates and thus tend to underperform fixed rate securities when interest rates rise but outperform them when interest rates decline. To the extent the Fund invests in fixed income securities paying no interest, such as zero coupon and principal-only securities, it will be exposed to additional interest rate risk.

The market price of inflation indexed bonds (including Inflation-Protected Securities issued by the U.S. Treasury ("TIPS")) normally changes when real interest rates change. Their value typically will decline during periods of rising real interest rates (i.e., nominal interest rate minus inflation) and increase during periods of declining real interest rates. Real interest rates may not fluctuate in the same manner as nominal interest rates. In some interest rate environments, such as when real interest rates are rising faster than nominal interest rates, the market price of inflation indexed bonds may decline more than the price of non-inflation indexed (or nominal) fixed income bonds with similar maturities. The market price of the Fund's inflation indexed bonds, however, will not necessarily change in the same proportion as changes in nominal interest rates, and short term increases in inflation may lead to a decline in their price. Moreover, if the index measuring inflation falls, the principal value of inflation indexed bond investments will be adjusted downward, and, consequently, the interest they pay (calculated with respect to a smaller principal amount) will be reduced. In the case of TIPS, the U.S. government guarantees the repayment of the original bond principal upon maturity (as adjusted for inflation).

Generally, when interest rates on short term U.S. Treasury obligations equal or approach zero, a Fund that invests a substantial portion of its assets in U.S. Treasury obligations, such as GMO U.S. Treasury Fund, will have a negative return unless GMO waives or reduces its management fees.

Market risk for fixed income securities denominated in non-U.S. currencies is also affected by currency risk. See "Currency Risk" above.

### **Natural Resources Risk**

To the extent an underlying fund concentrates its investments in the natural resources sector, it is subject to greater risks than a fund that invests in a wider variety of industries. An underlying fund with concentrated investments in the natural resources sector is particularly exposed to adverse developments, including adverse price movements, affecting issuers in the natural resources sector. In addition, the market prices of securities of companies in the natural resources sector may be more volatile than those of securities of companies in other industries. Some of the commodities used as raw materials or produced by these companies are subject to broad price fluctuations as a result of industry wide supply and demand factors. Companies in the natural resources sector often have limited pricing power over supplies or for the products they sell, which can affect their profitability. Companies in the natural resources sector also may be subject to special risks associated with natural or man-made disasters. In addition, the natural resources sector can be especially affected by political and economic developments, government regulations including changes in tax law or interpretations of law, energy conservation, and the success of exploration projects. Specifically, the natural resource sector can be significantly affected by import controls, worldwide competition, changes in consumer sentiment and spending, and can be subject to liability for, among other things, environmental damage, depletion of resources, and mandated expenditures for safety and pollution control.

An underlying fund's concentration in the securities of natural resource companies exposes it to the price movements of natural resources to a greater extent than if it were more broadly diversified. If an underlying fund invests primarily in this economic sector, there is the risk that such underlying fund will perform poorly during an economic downturn or a decline in demand for natural resources.

### **Non-Diversified Funds Risk**

The Fund invests a portion of its assets in shares of one or more other funds that are not "diversified" investment companies within the meaning of the 1940 Act. This means they are allowed to invest in the securities of a relatively small number of issuers and/or non-U.S. currencies. As a result, they may be subject to greater credit, market and other risks,

and poor performance by a single issuer may have a greater impact on their performance, than if they were "diversified." The Fund may invest without limitation in funds that are not diversified.

### **Non-U.S. Investment Risk**

A Fund that invests in non-U.S. securities is subject to additional and more varied risks than a fund whose investments are limited to U.S. securities. The securities markets of many non-U.S. countries include securities of only a limited number of companies in a limited number of industries. As a result, the market prices of many of those securities fluctuate more than those of U.S. securities. In addition, issuers of non-U.S. securities often are not subject to the same degree of regulation as U.S. issuers. Reporting, accounting, custody and auditing standards of non-U.S. countries differ, in some cases significantly, from U.S. standards. Non-U.S. portfolio transactions generally involve higher commission rates, transfer taxes, and custodial costs. In addition, some jurisdictions may limit the Fund's ability to profit from short term trading (as defined in the relevant jurisdiction).

A Fund may be subject to non-U.S. taxation, including potentially on a retroactive basis, on (i) capital gains it realizes or dividends or interest it receives on non-U.S. investments, (ii) transactions in those investments, and (iii) the repatriation of proceeds generated from the sale of those investments. A Fund may seek to collect a refund in respect of taxes paid to a non-U.S. country. In those cases, all or a portion of those taxes could ultimately be recovered by a Fund. However, the recovery process could take several years and the Fund will incur expenses in its efforts to collect the refund, which will reduce the benefit of any recovery. A Fund's efforts to collect a refund may not be successful, in which case the Fund will have incurred additional expenses for no economic benefit. A Fund's decision to pursue a refund is in its sole discretion, and it may decide not to pursue a refund, even if eligible.

Also, investing in non-U.S. securities exposes the Fund to the risk of nationalization, expropriation, or confiscatory taxation of assets of their issuers, adverse changes in investment regulations, capital requirements or exchange controls (which may include suspension of the ability to transfer currency from a country), and adverse political and diplomatic developments.

In some non-U.S. markets, custody arrangements for securities provide significantly less protection than custody arrangements in U.S. markets, and prevailing custody and trade settlement practices (e.g., the requirement to pay for securities prior to receipt) expose the Fund to credit and other risks it does not have in the U.S. with respect to participating brokers, custodians, clearing banks or other clearing agents, escrow agents and issuers. Fluctuations in non-U.S. currency exchange rates also will affect the market value of the Fund's non-U.S. investments (see "Currency Risk" above).

U.S. investors are required to maintain a license to invest directly in many non-U.S. markets. These licenses are often subject to limitations, including maximum investment amounts. Once a license is obtained, the Fund's ability to continue to invest directly is subject to the risk that the license will be terminated or suspended. If a license is terminated or suspended, to obtain exposure to the market, the Fund will be required to purchase American Depositary Receipts, Global Depositary Receipts, shares of other funds that are licensed to invest directly, or derivative instruments. The receipt of a non-U.S. license by one of GMO's clients may preclude other clients, including an underlying fund, from obtaining a similar license, and this could limit the underlying fund's investment opportunities. In addition, the activities of another of GMO's clients could cause the suspension or revocation of a license and thereby limit an underlying fund's investment opportunities.

A Fund that invests a significant portion of its assets in securities of issuers tied economically to emerging countries (or investments related to emerging markets) is subject to greater non-U.S. investment risk than a fund investing primarily in more developed non-U.S. countries (or markets). The risks of investing in those securities include: greater fluctuations in currency exchange rates; increased risk of default (by both government and private issuers); greater social, economic, and political uncertainty and instability (including the risk of war or natural disaster); increased risk of nationalization, expropriation, or other confiscation of assets of issuers of securities in a Fund's portfolio; greater governmental involvement in the economy; less governmental supervision and regulation of the securities markets and participants in those markets; controls on non-U.S. investment, capital controls and limitations on repatriation of invested capital, dividends, interest and other income and on the Fund's ability to exchange local currencies for U.S. dollars; inability to purchase and sell investments or otherwise settle security or derivative transactions (i.e., a market freeze); unavailability of currency hedging techniques; differences in, or lack of, auditing and financial reporting standards and resulting unavailability of material information about issuers; slower clearance and settlement; difficulties in obtaining and/or enforcing legal judgments; and significantly smaller market capitalizations of issuers.

### **Options Risk**

The market price of options written by a Fund will be affected by many factors, including changes in the market price or dividend rates of underlying securities (or in the case of indices, the securities comprising such indices); changes in

interest rates or exchange rates; changes in the actual or perceived volatility of the relevant stock market and underlying securities; and the time remaining before an option's expiration. The market price of an option also may be adversely affected if the market for the option becomes less liquid. In addition, since an American-style option allows the holder to exercise its rights any time prior to the option's expiration, the writer of an American-style option has no control over when it may be required to fulfill its obligations as a writer of the option. (This risk is not present when writing a European-style option because the holder may only exercise the option on its expiration date.) If a Fund writes a call option and does not hold the underlying security or instrument, the Fund's potential loss is theoretically unlimited.

National securities exchanges generally have established limits on the maximum number of options an investor or group of investors acting in concert may write. A Fund, GMO, and other funds advised by GMO may constitute such a group. These limits could restrict a Fund's ability to purchase or write options on a particular security.

Unlike exchange-traded options, which are standardized with respect to the underlying instrument, expiration date, contract size, and strike price, the terms of OTC options (i.e., options not traded on exchanges) generally are established through negotiation with the other party to the option contract. While a Fund has greater flexibility to tailor an OTC option, OTC options generally expose a Fund to greater credit risk than exchange-traded options, which are guaranteed by the clearing organization of the exchanges where they are traded. Purchasing and writing put and call options are highly specialized activities and entail greater than ordinary market risks.

Special tax rules apply to a Fund's transactions in options, which could increase the amount of taxes payable by shareholders. In particular, a Fund's options transactions potentially could cause a substantial portion of the Fund's income to consist of net short-term capital gains, which, when distributed, are taxable to shareholders as ordinary income tax rates. Due to an underlying fund's primary investment strategy of selling put options on various stock indices, a substantial portion of such underlying fund's income could consist of short-term capital gains. See "Taxes" below for more information.

### **Real Estate Risk**

The value of the portfolio of an underlying fund that concentrates its assets in real estate related investments is subject to factors affecting the real estate industry and may fluctuate more than the value of a portfolio that consists of securities of companies in a broader range of industries. Factors affecting real estate values include the supply of real property in particular markets, overbuilding, changes in zoning laws, casualty or condemnation losses, delays in completion of construction, changes in real estate values, changes in operations costs and property taxes, levels of occupancy, adequacy of rent to cover operating costs, possible environmental liabilities, regulatory limitations on rent, fluctuations in rental income, increased competition and other risks related to local and regional market conditions. The value of real-estate related investments also may be affected by changes in interest rates, macroeconomic developments, and social and economic trends. For instance, during periods of declining interest rates, certain mortgage real estate investment trusts ("REITs") may hold mortgages that the mortgagors elect to prepay, which prepayment may reduce the yield on securities issued by those REITs. Some REITs have relatively small market capitalizations, which can tend to increase the volatility of the market price of their securities. REITs are subject to the risk of fluctuations in income from underlying real estate assets, their inability to manage effectively the cash flows generated by those assets, prepayments and defaults by borrowers, and their failure to qualify for the special tax treatment granted to REITs under the Internal Revenue Code of 1986, as amended, or to maintain their exemption from investment company status under the 1940 Act.

### **Short Sales Risk**

The Fund may use short sales in its investment program in an attempt to increase its returns or for hedging purposes.

In implementing their principal investment strategies, some underlying funds are permitted to engage in short sales of securities or currencies that they do not own. To do so, the underlying funds borrow a security (e.g., shares of an exchange-traded fund ("ETF")) or currency from a broker and sell it to a third party. This type of short sale exposes the underlying fund to the risk that it will be required to acquire, convert or exchange securities or currencies to replace the borrowed securities at a time when the securities or currencies sold short have appreciated in value, thus resulting in a loss to the underlying fund. If the underlying fund engages in short sales of securities or currencies it does not own, it may have to pay a premium to borrow the securities or currencies and must pay to the lender any dividends or interest it receives on the securities or currencies while they are borrowed. In addition, purchasing securities or currencies to close out a short position can itself cause the price of the securities or currencies to rise further, thereby exacerbating any losses.

Short sales of securities or currencies in the underlying fund does not own involve a form of investment leverage, and the amount of the Fund's potential loss is theoretically unlimited. The Fund may be subject to increased leveraging risk and other investment risks described in this "Description of Principal Investment Risks" section to the extent it sells short securities or currencies it does not own.

**Smaller Company Risk**

Companies with smaller market capitalizations, including small- and mid-cap companies, may have limited product lines, markets or financial resources, may lack the competitive strength of larger companies, or may lack managers with experience or depend on a few key employees. In addition, their securities often are less widely held and trade less frequently and in lesser quantities, and their market prices often fluctuate more, than the securities of companies with larger market capitalizations. In addition, market risk and liquidity risk are particularly pronounced for securities of these companies.

## Portfolio Holdings Information

---

A description of the *Wells Fargo Advantage Funds'* policies and procedures with respect to disclosure of the *Wells Fargo Advantage Funds'* portfolio holdings is available in the Fund's Statement of Additional Information. In addition, Funds Management will, from time to time, include portfolio holdings information in periodic commentaries for the Fund. The substance of the information contained in such commentaries will also be posted to the Fund's Web site at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com).

# Organization and Management of the Fund

## About Wells Fargo Funds Trust

The Trust was organized as a Delaware statutory trust on March 10, 1999. The Board of Trustees of the Trust ("Board") supervises the Fund's activities, monitors its contractual arrangements with various service providers and decides on matters of general policy.

The Board supervises the Fund and approves the selection of various companies hired to manage the Fund's operations. Except for the Fund's advisers, which generally may be changed only with shareholder approval, other service providers may be changed by the Board without shareholder approval.

## The Adviser and Portfolio Managers

Wells Fargo Funds Management, LLC ("Funds Management"), headquartered at 525 Market Street, San Francisco, CA 94105, serves as the adviser for the Fund. Funds Management is a wholly owned subsidiary of Wells Fargo & Company, a publicly traded diversified financial services company that provides banking, insurance, investment, mortgage and consumer financial services. Funds Management is a registered investment adviser that provides advisory services for registered mutual funds, closed-end funds and other funds and accounts.

As adviser, Funds Management is responsible for implementing the investment objectives and strategies of the Fund. Funds Management's investment professionals review and analyze the Fund's performance, including relative to peer funds, and monitor the Fund's compliance with its investment objective and strategies. Funds Management is responsible for reporting to the Board on investment performance and other matters affecting the Fund. When appropriate, Funds Management recommends to the Board enhancements to Fund features, including changes to Fund investment objectives, strategies and policies. Funds Management also communicates with shareholders and intermediaries about Fund performance and features.

For providing these investment advisory services, Funds Management is entitled to receive the fees disclosed in the row captioned "Management Fees" in the Fund's table of Annual Fund Operating Expenses. A discussion regarding the basis for the Board's approval of the advisory agreement for the Fund will be available in the Fund's semi-annual shareholder report for the fiscal half-year ended March 31.

As compensation for its advisory and Fund-level administrative services, Funds Management is entitled to receive a monthly fee at the annual rates indicated below of the Fund's average daily net assets:

### Advisory Fees Paid

	As a % of average daily net assets
Absolute Return Fund	0.21%

As compensation for its advisory services to the Benchmark-Free Allocation Fund, Benchmark-Free Allocation Fund pays GMO an annual management fee equal to 0.65% of Benchmark-Free Allocation Fund's average daily net assets. Pursuant to the terms of Benchmark-Free Allocation Fund's management contract, the fees payable to GMO under the management contract are reduced or waived to the extent necessary to offset the management fees directly or indirectly paid to GMO as a result of the Benchmark-Free Allocation Fund's investment in the underlying funds.

<b>Ben Inker, CFA</b>	The Fund will invest substantially all of its assets directly in Benchmark-Free Allocation Fund. Day-to-day management of Benchmark-Free Allocation Fund is the responsibility of GMO's Asset Allocation Division (the "Division"). The Division's members work collaboratively to manage Benchmark-Free Allocation Fund's portfolio, and no one person is primarily responsible for day-to-day management of Benchmark-Free Allocation Fund. Ben Inker and Sam Wilderman, the Co-Heads of the Division, allocate the responsibility for portions of Benchmark-Free Allocation Fund's portfolio to various members of the Division, oversee the implementation of the trades on behalf of Benchmark-Free Allocation Fund, review the overall composition of the portfolio, including compliance with stated investment objectives and strategies, and monitor cash flows. Mr. Inker has served as a senior member of the Division responsible for coordinating the portfolio management of Benchmark-Free Allocation Fund since the Fund's inception. Mr. Inker has been responsible for overseeing the Fund since its inception.
-----------------------	---

<b>Sam Wilderman, CFA</b>	<p>The Fund will invest substantially all of its assets directly in Benchmark-Free Allocation Fund. # A Choice of Share Classes

After choosing a Fund, your next most important choice will be which share class to buy. The table below summarizes the features of the classes of shares available through this Prospectus. Specific Fund charges may vary, so you should review each Fund's fee table as well as the sales charge schedules that follow. Finally, you should review the "Reductions and Waivers of Sales Charges" section of the Prospectus before making your decision as to which share class to buy.

	Class A	Class C
<b>Initial Sales Charge</b>	5.75%	None. Your entire investment goes to work immediately.
<b>Contingent deferred sales charge (CDSC)</b>	None (except that a charge of 1% applies to certain redemptions made within eighteen months, following purchases of \$1 million or more without an initial sales charge).	1% if shares are sold within one year after purchase.
<b>Ongoing distribution (12b-1) fees</b>	None.	0.75%
<b>Purchase maximum</b>	None. Volume reductions given upon providing adequate proof of eligibility.	\$1,000,000
<b>Annual Expenses</b>	Lower ongoing expenses than Class C.	Higher ongoing expenses than Class A because of higher 12b-1 fees.

Information regarding the Fund's sales charges, breakpoints, and waivers is available free of charge on our Web site at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com). You may wish to discuss this choice with your financial consultant.

## Class A Shares Sales Charge Schedule

If you choose to buy Class A shares, you will pay the public offering price (POP) which is the net asset value (NAV) plus the applicable sales charge. Since sales charges are reduced for Class A share purchases above certain dollar amounts, known as "breakpoint levels," the POP is lower for these purchases. The dollar amount of the sales charge is the difference between the POP of the shares purchased (based on the applicable sales charge in the table below) and the NAV of those shares. Because of rounding in the calculation of the POP, the actual sales charge you pay may be more or less than that calculated using the percentages shown below.

### Class A Shares Sales Charge Schedule

Amount of Purchase	Front-end Sales Charge As % of Public Offering Price	Front-end Sales Charge As % of Net Amount Invested	Dealer Reallowance As % of Public Offering Price
Less than \$50,000	5.75%	6.10%	5.00%
\$50,000 - \$99,999	4.75%	4.99%	4.00%
\$100,000 - \$249,999	3.75%	3.90%	3.00%
\$250,000 - \$499,999	2.75%	2.83%	2.25%
\$500,000 - \$999,999	2.00%	2.04%	1.75%
\$1,000,000 and over <sup>1</sup>	0.00%	0.00%	1.00%

1. We will assess a 1.00% CDSC on Class A share purchases of \$1,000,000 or more if they are redeemed within eighteen months from the date of purchase. Certain exceptions apply (see "CDSC Waivers"). The CDSC percentage you pay is applied to the NAV of the shares on the date of original purchase.

## **Class C Shares Sales Charges**

If you choose Class C shares, you buy them at NAV and agree that if you redeem your shares within one year of the purchase date, you will pay a CDSC of 1.00%. At the time of purchase, the Fund's distributor pays sales commissions of up to 1.00% of the purchase price to selling agents and up to 1.00% annually thereafter. The CDSC percentage you pay is applied to the NAV of the shares on the date of original purchase. For Class C shares received in a reorganization, your date of purchase is the original purchase date of your predecessor Fund. To determine whether the CDSC applies to a redemption, the Fund will first redeem shares acquired by reinvestment of any distributions and then will redeem shares in the order in which they were purchased (such that shares held the longest are redeemed first).

# Reductions and Waivers of Sales Charges

---

Generally, we offer more sales charge reductions or waivers for Class A shares than for Class C shares, particularly if you intend to invest greater amounts. You should consider whether you are eligible for any of the potential reductions or waivers when you are deciding which share class to buy. Consult the Statement of Additional Information for further details regarding reductions and waivers of sales charges, which we may change from time to time.

## Class A Shares Sales Charge Reductions and Waivers

You can pay a lower or no sales charge for the following types of purchases. If you believe you are eligible for any of the following reductions or waivers, it is up to you to ask the selling agent or shareholder servicing agent for the reduction or waiver and to provide appropriate proof of eligibility.

- You pay no sales charges on Fund shares you buy with reinvested distributions.
- You pay a lower sales charge if you are investing an amount over a breakpoint level. See “Class A Shares Sales Charge Schedule” above.
- You pay no sales charges on Fund shares you purchase with the proceeds of a redemption of Class A shares of the same Fund within 90 days of the date of redemption. Subject to the Fund’s policy regarding frequent purchases and redemptions of Fund shares, you may not be able to exercise this provision for the first 30 days after your redemption. Systematic transactions through the automatic investment plan, the automatic exchange plan and the systematic withdrawal plan are excluded from this provision.
- By signing a **Letter of Intent (LOI)** prior to purchase, you pay a lower sales charge now in exchange for promising to invest an amount over a specified breakpoint within the next 13 months. Purchases made prior to signing the LOI as well as reinvested dividends and capital gains do not count as purchases made during this period. We will hold in escrow shares equal to approximately 5% of the amount you say you intend to buy. If you do not invest the amount specified in the LOI before the expiration date, we will redeem enough escrowed shares to pay the difference between the reduced sales load you paid and the sales load you should have paid. Otherwise, we will release the escrowed shares when you have invested the agreed amount.
- **Rights of Accumulation (ROA)** allow you to combine Class A and Class C and WealthBuilder Portfolio shares of any Wells Fargo Advantage Fund already owned (excluding Wells Fargo Advantage money market fund shares, unless you notify us that you previously paid a sales load on these assets) in order to reach breakpoint levels and to qualify for sales load discounts on subsequent purchases of Class A or WealthBuilder Portfolio shares. The purchase amount used in determining the sales charge on your purchase will be calculated by multiplying the maximum public offering price by the number of Class A, Class C and WealthBuilder Portfolio shares of any Wells Fargo Advantage Fund already owned and adding the dollar amount of your current purchase.

### How a Letter of Intent Can Save You Money!

If you plan to invest, for example, \$100,000 in a Wells Fargo Advantage Fund in installments over the next year, by signing a letter of intent you would pay only 3.75% sales load on the entire purchase. Otherwise, you would pay 5.75% on the first \$49,999, then 4.75% on the next \$50,000!

## Accounts That Can Be Aggregated

You may aggregate the following types of accounts indicated below to qualify for a volume discount:

Can this type of account be aggregated?	Yes	No
Individual accounts	✓	
Joint accounts	✓	
UGMA/UTMA accounts	✓	
Trust accounts over which the shareholder has individual or shared authority	✓	
Solely owned business accounts	✓	
<b>Retirement Plans</b>		
Traditional and Roth IRAs	✓	
SEP IRAs	✓	
SIMPLE IRAs that use the <i>Wells Fargo Advantage Funds</i> prototype agreement <sup>1</sup>		✓
SIMPLE IRAs that do not use the <i>Wells Fargo Advantage Funds</i> prototype agreement	✓	
403(b) Plan accounts <sup>2</sup>	✓	
401(k) Plan accounts		✓
<b>Other Accounts</b>		
529 Plan accounts <sup>1</sup>		✓
Accounts held through other brokerage firms		✓

1. These accounts may be aggregated at the plan level for purposes of establishing eligibility for volume discounts. When plan assets in Fund Class A, Class B, Class C and WealthBuilder Portfolio shares (excluding Wells Fargo Advantage money market fund shares) reach a breakpoint, all plan participants benefit from the reduced sales charge. Participant accounts will not be aggregated with personal accounts.
2. Wells Fargo Advantage Funds no longer offers new or accepts purchases in existing 403(b) accounts utilizing the Wells Fargo Advantage Funds prototype agreement.

Based on the above chart, if you believe that you own shares in one or more accounts that can be combined with your current purchase to achieve a sales charge breakpoint, you must, at the time of your purchase specifically identify those shares to your selling agent or shareholder servicing agent. For an account to qualify for a volume discount, it must be registered in the name of, or held for, the shareholder, his or her spouse or domestic partner, as recognized by applicable state law, or his or her children under the age of 21. Class A shares purchased at NAV will not be aggregated with other shares for purposes of receiving a volume discount.

### Class A Shares Sales Charge Waivers for Certain Parties

We reserve the right to enter into agreements that reduce or waive sales charges for groups or classes of shareholders. If you own Fund shares as part of another account or package such as an IRA or a sweep account, you should read the materials for that account. Those terms may supercede the terms and conditions discussed here. If you fall into any of the following categories, you can buy Class A shares at NAV:

- Current and retired employees, directors/trustees and officers of:
  - 1) Wells Fargo Advantage Funds (including any predecessor funds);
  - 2) Wells Fargo & Company and its affiliates; and
  - 3) family members (spouse, domestic partner, parents, grandparents, children, grandchildren and siblings (including step and in-law)) of any of the above.
- Current employees of:
  - 1) the Fund's transfer agent;
  - 2) broker-dealers who act as selling agents;
  - 3) family members (spouse, domestic partner, parents, grandparents, children, grandchildren and siblings (including step and in-law)) of any of the above; and
  - 4) each Fund's sub-adviser, but only for the Fund(s) for which such sub-adviser provides investment advisory services.
- Qualified registered investment advisers who buy through a broker-dealer or service agent who has entered into an agreement with the Fund's distributor that allows for load-waived Class A purchases.
- Investment companies exchanging shares or selling assets pursuant to a reorganization, merger, acquisition, or exchange offer to which the Fund is a party.
- Section 529 college savings plan accounts.
- Insurance company separate accounts.
- Fund of Funds, including those advised by Funds Management (Wells Fargo Advantage WealthBuilder Portfolios<sup>SM</sup>), subject to review and approval by Funds Management.

- Investors who purchase shares that are to be included in certain retirement, benefit, pension, trust or investment “wrap accounts,” including such specified types of investors who trade through an omnibus account maintained with a Fund by a broker-dealer.

#### **CDSC Waivers**

- You will not be assessed a CDSC on Fund shares you redeem that were purchased with reinvested distributions.
- We waive the CDSC for all redemptions made because of scheduled (Internal Revenue Code Section 72(t)(2) withdrawal schedule) or mandatory distributions (withdrawals generally made after age 70½ according to Internal Revenue Service guidelines) from traditional IRAs and certain other retirement plans. (See your retirement plan information for details.)
- We waive the CDSC for redemptions made in the event of the last surviving shareholder’s death or for a disability suffered after purchasing shares. (“Disabled” is defined in Internal Revenue Code Section 72(m)(7).)
- We waive the CDSC for redemptions made at the direction of Funds Management in order to, for example, complete a merger or effect a Fund liquidation.
- We waive the Class C shares CDSC for redemptions by employer-sponsored retirement plans where the dealer of record waived its commission at the time of purchase.

We also reserve the right to enter into agreements that reduce or eliminate sales charges for groups or classes of shareholders, or for Fund shares included in other investment plans such as “wrap accounts.” If you own Fund shares as part of another account or package, such as an IRA or a sweep account, you should read the terms and conditions that apply for that account. Those terms and conditions may supercede the terms and conditions discussed here. Contact your selling agent for further information.

# Compensation to Dealers and Shareholder Servicing Agents

## Distribution Plan

The Fund has adopted a Distribution Plan (12b-1 Plan) pursuant to Rule 12b-1 under the 1940 Act for the Class C shares. The 12b-1 Plan authorizes the payment of all or part of the cost of preparing and distributing prospectuses and distribution-related services. The 12b-1 Plan also provides that, if and to the extent any shareholder servicing payments are recharacterized as payments for distribution-related services, they are approved and payable under the 12b-1 Plan. The fees paid under this 12b-1 Plan are as follows:

Fund	Class C
Absolute Return Fund	0.75%

This fee is paid out of the Class's assets on an ongoing basis. Over time, this fee will increase the cost of your investment and may cost you more than other types of sales charges.

## Shareholder Servicing Plan

The Fund has a shareholder servicing plan. Under this plan, the Fund has agreements with various shareholder servicing agents to process purchase and redemption requests, to service shareholder accounts, and to provide other related services for each Class of the Fund. For these services, each Class pays an annual fee of up to 0.25% of its average daily net assets.

## Additional Payments to Dealers

In addition to dealer reallowances and payments made by the Fund for distribution and shareholder servicing, the Fund's adviser, the distributor or their affiliates make additional payments ("Additional Payments") to certain selling or shareholder servicing agents for the Fund, which include broker-dealers and 401(k) service providers and recordkeepers. These Additional Payments are made in connection with the sale and distribution of shares of the Fund or for services to the Fund and its shareholders. These Additional Payments, which may be significant, are paid by the Fund's adviser, the distributor or their affiliates, out of their revenues, which generally come directly or indirectly from fees paid by the entire Fund complex.

In return for these Additional Payments, the Fund's adviser and distributor expect the Fund to receive certain marketing or servicing advantages that are not generally available to mutual funds that do not make such payments. Such advantages are expected to include, without limitation, placement of the Fund on a list of mutual funds offered as investment options to the selling agent's clients (sometimes referred to as "Shelf Space"); access to the selling agent's registered representatives; and/or ability to assist in training and educating the selling agent's registered representatives.

Certain selling or shareholder servicing agents receive these Additional Payments to supplement amounts payable by the Fund under the shareholder servicing plans. In exchange, these agents provide services including, but not limited to, establishing and maintaining accounts and records; answering inquiries regarding purchases, exchanges and redemptions; processing and verifying purchase, redemption and exchange transactions; furnishing account statements and confirmations of transactions; processing and mailing monthly statements, prospectuses, shareholder reports and other SEC-required communications; and providing the types of services that might typically be provided by the Fund's transfer agent (e.g., the maintenance of omnibus or omnibus-like accounts, the use of the National Securities Clearing Corporation for the transmission of transaction information and the transmission of shareholder mailings).

The Additional Payments may create potential conflicts of interest between an investor and a selling agent who is recommending a particular mutual fund over other mutual funds. Before investing, you should consult with your financial consultant and review carefully any disclosure by the selling agent as to what monies they receive from mutual fund advisers and distributors, as well as how your financial consultant is compensated.

The Additional Payments are typically paid in fixed dollar amounts, or based on the number of customer accounts maintained by the selling or shareholder servicing agent, or based on a percentage of sales and/or assets under management, or a combination of the above. The Additional Payments are either up-front or ongoing or both. The Additional Payments differ among selling and shareholder servicing agents. Additional Payments to a selling agent that is compensated based on its customers' assets typically range between 0.05% and 0.30% in a given year of assets invested in the Fund by the selling agent's customers. Additional Payments to a selling agent that is compensated based on a percentage of sales typically range between 0.10% and 0.15% of the gross sales of the Fund attributable to the selling agent. In addition, representatives of the Funds' distributor visit selling agents on a regular basis to educate their

registered representatives and to encourage the sale of Fund shares. The costs associated with such visits may be paid for by the Fund's adviser, distributor, or their affiliates, subject to applicable FINRA regulations.

More information on the FINRA member firms that have received the Additional Payments described in this section is available in the Statement of Additional Information, which is on file with the SEC and is also available on the *Wells Fargo Advantage Funds* website at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com).

# Pricing Fund Shares

---

The share price ("net asset value per share" or "NAV") for a Fund is calculated each business day as of the close of trading on the New York Stock Exchange ("NYSE") (generally 4 p.m. ET). To calculate a Fund's NAV, the Fund's assets are valued and totaled, liabilities are subtracted, and the balance, called net assets, is divided by the number of shares outstanding. The price at which a purchase or redemption of Fund shares is effected is based on the next calculation of NAV after the order is placed. The Fund does not calculate its NAV on days the NYSE is closed for trading, which include New Year's Day, Martin Luther King, Jr. Day, Washington's Birthday, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

With respect to any portion of a Fund's assets that may be invested in other mutual funds, the Fund's NAV is calculated based upon the net asset values of the other mutual funds in which the Fund invests, and the prospectuses for those companies explain the circumstances under which those companies will use fair value pricing and the effects of using fair value pricing.

With respect to any portion of a Fund's assets invested directly in securities, the Fund's investments are generally valued at current market prices. Securities are generally valued based on the last sale price during the regular trading session if the security trades on an exchange (closing price). Securities that are not traded primarily on an exchange generally are valued using latest quoted bid prices obtained by an independent pricing service. Securities listed on the Nasdaq Stock Market, Inc., however, are valued at the Nasdaq Official Closing Price ("NOCP"), and if no NOCP is available, then at the last reported sales price.

We are required to depart from these general valuation methods and use fair value pricing methods to determine the values of certain investments if we believe that the closing price or the latest quoted bid price of a security, including securities that trade primarily on a foreign exchange, does not accurately reflect its current value when the Fund calculates its NAV. In addition, we use fair value pricing to determine the value of investments in securities and other assets, including illiquid securities, for which current market quotations are not readily available. The closing price or the latest quoted bid price of a security may not reflect its current value if, among other things, a significant event occurs after the closing price or latest quoted bid price but before a Fund calculates its NAV that materially affects the value of the security. We use various criteria, including a systematic evaluation of U.S. market moves after the close of foreign markets, in deciding whether a foreign security's market price is still reliable and, if not, what fair market value to assign to the security.

In light of the judgment involved in fair value decisions, there can be no assurance that a fair value assigned to a particular security is accurate or that it reflects the price that the Fund could obtain for such security if it were to sell the security as of the time of fair value pricing. Such fair value pricing may result in NAVs that are higher or lower than NAVs based on the closing price or latest quoted bid price. See the Statement of Additional Information for additional details regarding the pricing of Fund shares.

# How to Open an Account

---

You can open a *Wells Fargo Advantage Funds* account through any of the following means:

- directly with the Fund. Complete a *Wells Fargo Advantage Funds* application, which you may obtain by visiting our Web site at [wellsfargoadvantagefunds.com](https://wellsfargoadvantagefunds.com) or by calling Investor Services at 1-800-222-8222. Be sure to indicate the Fund name and the share class into which you intend to invest when completing the application;
- through a brokerage account with an approved selling agent; or
- through certain retirement, benefit and pension plans or certain packaged investment products. (Please contact the providers of the plan or product for instructions.)

# How to Buy Shares

This section explains how you can buy shares directly from *Wells Fargo Advantage Funds*. If you're opening a new account, an account application is available on-line at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com) or by calling Investor Services at 1-800-222-8222. For Fund shares held through brokerage and other types of accounts, please consult your selling agent.

Minimum Investments	Initial Purchase	Subsequent Purchases
Regular accounts IRAs, IRA rollovers, Roth IRAs UGMA/UTMA accounts Employer Sponsored Retirement Plans	\$1,000 \$250 \$50 No minimum	\$100 \$100 \$50 No minimum
Buying Shares	Opening an Account	Adding to an Account
Online	A new account may not be opened online unless you have another Wells Fargo Advantage Fund account with your bank information on file. If you do not currently have an account, refer to the section on buying shares by mail or wire.	<ul style="list-style-type: none"> <li>To buy additional shares or buy shares of a new Fund, visit <a href="http://wellsfargoadvantagefunds.com">wellsfargoadvantagefunds.com</a>.</li> <li>Subsequent online purchases have a minimum of \$100 and a maximum of \$100,000. ## General Notes for Buying Shares

- **Proper Form.** If the transfer agent receives your new account application or purchase request in proper form before the close of the NYSE, your transaction will be priced at that day's NAV. If your new account application or purchase request is received in proper form after the close of trading on the NYSE, your transaction will be priced at the next business day's NAV. If your new account application or purchase request is not in proper form, additional documentation may be required to process your transaction.
- **Earning Distributions.** You are eligible to earn distributions beginning on the business day after the transfer agent receives your purchase in proper form.
- **U.S. Dollars Only.** All payments must be made in U.S. dollars and all checks must be drawn on U.S. banks.
- **Insufficient Funds.** You will be charged a \$25.00 fee for every check or Electronic Funds Transfer that is returned to us as unpaid.
- **No Fund Named.** When all or a portion of a payment is received for investment without a clear Fund designation, we may direct the undesignated portion or the entire amount, as applicable, into the Wells Fargo Advantage Money Market Fund. We will treat your inaction as approval of this purchase until you later direct us to sell or exchange these shares of the Money Market Fund, at the next NAV calculated after we receive your order in proper form.
- **Right to Refuse an Order.** We reserve the right to refuse or cancel a purchase or exchange order for any reason, including if we believe that doing so would be in the best interests of a Fund and its shareholders.
- **Minimum Initial and Subsequent Investment Waivers.** We allow a reduced minimum initial investment of \$50 if you sign up for at least a \$50 monthly automatic investment purchase plan. If you opened your account with the set minimum amount shown in the above chart, we allow reduced subsequent purchases for a minimum of \$50 a month if you purchase through an automatic investment plan. We may also waive or reduce the minimum initial and subsequent investment amounts for purchases made through certain retirement, benefit and pension plans, certain packaged investment products, or for certain classes of shareholders as permitted by the SEC. Check specific disclosure statements and applications for the program through which you intend to invest.
- **Other Share Classes.** You may be eligible to invest in one or more classes of shares offered by a Fund. Each of the Fund's share classes bears varying expenses and may differ in other features. Consult your financial intermediary for more information regarding the Fund's available share classes.

## Special Considerations When Investing Through Financial Intermediaries

If a financial intermediary purchases shares on your behalf, you should understand the following:

- **Minimum Investments and Other Terms of Your Account.** Share purchases are made through a customer account at your financial intermediary following that firm's terms. Financial intermediaries may require different minimum investment amounts. Please consult an account representative from your financial intermediary for specifics.
- **Records are Held in Financial Intermediary's Name.** Financial intermediaries are usually the holders of record for shares held through their customer accounts. The financial intermediaries maintain records reflecting their customers' beneficial ownership of the shares.
- **Purchase/Redemption Orders.** Financial intermediaries are responsible for transmitting their customers' purchase and redemption orders to a Fund and for delivering required payment on a timely basis.
- **Shareholder Communications.** Financial intermediaries are responsible for delivering shareholder communications and voting information from a Fund, and for transmitting shareholder voting instructions to a Fund.

The information provided in this Prospectus is not intended for distribution to, or use by, any person or entity in any non-U.S. jurisdiction or country where such distribution or use would be contrary to law or regulation, or which would subject Fund shares to any registration requirement within such jurisdiction or country.

The Fund is distributed by Wells Fargo Funds Distributor, LLC, a member of FINRA/SIPC, and an affiliate of Wells Fargo & Company. Securities Investor Protection Corporation ("SIPC") information and brochure are available at [SIPC.org](http://SIPC.org) or by calling SIPC at (202) 371-8300.

# How to Sell Shares

The following section explains how you can sell shares held directly through an account with *Wells Fargo Advantage Funds*. For Fund shares held through brokerage or other types of accounts, please consult your selling agent.

Selling Shares	To Sell Some or All of Your Shares
Online	Visit our Web site at <a href="http://wellsfargoadvantagefunds.com">wellsfargoadvantagefunds.com</a> . Redemptions requested online are limited to a maximum of \$100,000. You may be eligible for an exception to this maximum. Please call Investor Services at 1-800-222-8222 for more information.
By Mail	<ul style="list-style-type: none"> <li>■ Send a Letter of Instruction providing your name, account number, the Fund from which you wish to redeem and the dollar amount you wish to receive (or write "Full Redemption" to redeem your remaining account balance) to the address below.</li> <li>■ Make sure all account owners sign the request exactly as their names appear on the account application.</li> <li>■ A Medallion guarantee may be required under certain circumstances (see "General Notes for Selling Shares").</li> </ul> <p><b>Regular Mail</b>  <i>Wells Fargo Advantage Funds</i>            P.O. Box 8266            Boston, MA 02266-8266</p> <p><b>Overnight Only</b>  <i>Wells Fargo Advantage Funds</i>            c/o Boston Financial Data Services            30 Dan Road            Canton, MA 02021-2809</p>
By Wire	<ul style="list-style-type: none"> <li>■ To arrange for a Federal Funds wire, call 1-800-222-8222.</li> <li>■ Be prepared to provide information on the commercial bank that is a member of the Federal Reserve wire system.</li> <li>■ Wire requests are sent to your bank account next business day if your request to redeem is received before the NYSE close.</li> </ul>
By Telephone/ Electronic Funds Transfer (EFT)	<ul style="list-style-type: none"> <li>■ Call an Investor Services representative at 1-800-222-8222 or use the automated phone system 1-800-368-7550.</li> <li>■ Telephone privileges are automatically made available to you unless you specifically decline them on your account application or subsequently in writing.</li> <li>■ Redemption requests may not be made by phone if the address on your account was changed in the last 15 days. In this event, you must request your redemption by mail (refer to the section on selling shares by mail).</li> <li>■ A check will be mailed to the address on record (if there have been no changes communicated to us within the last 15 days) or transferred to a linked bank account.</li> <li>■ Transfers made to a Wells Fargo Bank account are made available sooner than transfers to an unaffiliated institution.</li> <li>■ Redemptions processed by EFT to a linked Wells Fargo Bank account occur same day for Wells Fargo Advantage money market funds, and next day for all other Wells Fargo Advantage Funds.</li> <li>■ Redemptions to any other linked bank account may post in two business days. Please check with your financial institution for timing of posting and availability of funds.</li> </ul> <p>Note: Telephone transactions such as redemption requests made over the phone generally require only one of the account owners to call unless you have instructed us otherwise.</p>
Through Your Investment Representative	Contact your investment representative.

## General Notes For Selling Shares

- **Proper Form.** If the transfer agent receives your request to sell shares in proper form before the close of the NYSE, your transaction will be priced at that day's NAV. If your request to sell shares is received in proper form after the close of trading on the NYSE, it will be priced at the next business day's NAV. If your request is not in proper form, additional documentation may be required to sell your shares.
- **CDSC Fees.** Your redemption proceeds are net of any applicable CDSC fees.

- **Form of Redemption Proceeds.** You may request that your redemption proceeds be sent to you by check, by EFT into a bank account, or by wire. Please call Investor Services regarding requirements for linking bank accounts or for wiring funds. Although generally we pay redemption requests in cash, we reserve the right to determine in our sole discretion, whether to satisfy redemption requests by making payment in securities (known as a redemption in kind). In such case, we may pay all or part of the redemption in securities of equal value as permitted under the 1940 Act, and the rules thereunder. The redeeming shareholder should expect to incur transaction costs upon the disposition of the securities received.
- **Earning Distributions.** Your shares are eligible to earn distributions through the date of redemption. If you redeem shares on a Friday or prior to a holiday, your shares will continue to be eligible to earn distributions until the next business day.
- **Telephone/Internet Redemptions.** We will take reasonable steps to confirm that telephone and internet instructions are genuine. For example, we require proof of your identification, such as a Taxpayer Identification Number or username and password, before we will act on instructions received by telephone or the internet. We will not be liable for any losses incurred if we follow telephone or internet instructions we reasonably believe to be genuine. Your call may be recorded.
- **Right to Delay Payment.** We normally will send out checks within one business day, and in any event no more than seven days, after we accept your request to redeem. If you redeem shares recently purchased by check or through EFT or the Automatic Investment Plan, you may be required to wait up to seven business days before we will send your redemption proceeds. Our ability to determine with reasonable certainty that investments have been finally collected is greater for investments coming from accounts with banks affiliated with Funds Management than it is for investments coming from accounts with unaffiliated banks. Redemption payments also may be delayed under extraordinary circumstances or as permitted by the SEC in order to protect remaining shareholders. Such extraordinary circumstances are discussed further in the Statement of Additional Information.
- **Retirement Plans and Other Products.** If you purchased shares through a packaged investment product or retirement plan, read the directions for selling shares provided by the product or plan. There may be special requirements that supercede the directions in this Prospectus.
- **Medallion Guarantees.** Medallion guarantees are **only** required for mailed redemption requests under the following circumstances: (1) if the address on your account was changed within the last 15 days; (2) if the amount of the redemption exceeds \$100,000 and includes bank account information that is not currently on file with *Wells Fargo Advantage Funds* or if all of the owners of your Wells Fargo Advantage Fund account are not included in the registration of the bank account provided; or (3) if the redemption is made payable to a third party. You can get a Medallion guarantee at a financial institution such as a bank or brokerage house. We do not accept notarized signatures.

# How to Exchange Shares

---

Exchanges between *Wells Fargo Advantage Funds* involve two transactions: (1) a sale of shares of one Fund; and (2) the purchase of shares of another. In general, the same rules and procedures that apply to sales and purchases apply to exchanges. There are, however, additional factors you should keep in mind while making or considering an exchange:

- In general, exchanges may be made between like share classes of any Wells Fargo Advantage Fund offered to the general public for investment (i.e., a Fund not closed to new accounts), with the following exception: Class A shares of non-money market funds may also be exchanged for Service Class shares of any money market fund.
- Same-fund exchanges between share classes are permitted subject to the following conditions: (1) exchanges out of Class A and Class C shares would not be allowed if shares are subject to a CDSC; (2) for exchanges into Class A shares, the shareholder must meet all qualifications to purchase Class A shares at net asset value based on current prospectus guidelines; and (3) the shareholder must meet the eligibility guidelines of the class being purchased in the exchange.
- An exchange request will be processed on the same business day, provided that both Funds are open at the time the request is received. If one or both Funds are closed, the exchange will be processed on the following business day.
- You should carefully read the prospectus for the Wells Fargo Advantage Fund into which you wish to exchange.
- Every exchange involves selling Fund shares, which may produce a capital gain or loss for tax purposes.
- If you are making an initial investment into a Fund through an exchange, you must exchange at least the minimum initial purchase amount for the new Fund, unless your balance has fallen below that amount due to investment performance.
- Any exchange between two *Wells Fargo Advantage Funds* must meet the minimum subsequent purchase amounts.
- Class B and Class C share exchanges will not trigger the CDSC. The new shares will continue to age according to their original schedule and will be charged the CDSC applicable to the original shares upon redemption.

Generally, we will notify you at least 60 days in advance of any changes in our exchange policy.

## Frequent Purchases and Redemptions of Fund Shares

*Wells Fargo Advantage Funds* reserves the right to reject any purchase or exchange order for any reason. Purchases or exchanges that a Fund determines could harm the Fund may be rejected.

Excessive trading by Fund shareholders can negatively impact a Fund and its long-term shareholders in several ways, including disrupting Fund investment strategies, increasing transaction costs, decreasing tax efficiency, and diluting the value of shares held by long-term shareholders. Excessive trading in Fund shares can negatively impact a Fund's long-term performance by requiring it to maintain more assets in cash or to liquidate portfolio holdings at a disadvantageous time. Certain Funds may be more susceptible than others to these negative effects. For example, Funds that have a greater percentage of their investments in non-U.S. securities may be more susceptible than other Funds to arbitrage opportunities resulting from pricing variations due to time zone differences across international financial markets. Similarly, Funds that have a greater percentage of their investments in small company securities may be more susceptible than other Funds to arbitrage opportunities due to the less liquid nature of small company securities. Both types of Funds also may incur higher transaction costs in liquidating portfolio holdings to meet excessive redemption levels. Fair value pricing may reduce these arbitrage opportunities, thereby reducing some of the negative effects of excessive trading.

***Wells Fargo Advantage Funds, other than the Adjustable Rate Government Fund, Conservative Income Fund, Ultra Short-Term Income Fund and Ultra Short-Term Municipal Income Fund ("Ultra-Short Funds") and the money market funds, (the "Covered Funds").*** The Covered Funds are not designed to serve as vehicles for frequent trading. The Covered Funds actively discourage and take steps to prevent the portfolio disruption and negative effects on long-term shareholders that can result from excessive trading activity by Covered Fund shareholders. The Board has approved the Covered Funds' policies and procedures, which provide, among other things, that Funds Management may deem trading activity to be excessive if it determines that such trading activity would likely be disruptive to a Covered Fund by increasing expenses or lowering returns. In this regard, the Covered Funds take steps to avoid accommodating frequent purchases and redemptions of shares by Covered Fund shareholders. Funds Management monitors available shareholder trading information across all Covered Funds on a daily basis. If a shareholder redeems more than \$5,000 (including redemptions that are part of an exchange transaction) from a Covered Fund, that shareholder is "blocked" from purchasing shares of that Covered Fund (including purchases that are part of an exchange transaction) for 30 calendar days after the redemption. This policy does not apply to:

- Money market funds;
- Ultra-Short Funds;

- Dividend reinvestments;
- Systematic investments or exchanges where the financial intermediary maintaining the shareholder account identifies the transaction as a systematic redemption or purchase at the time of the transaction;
- Rebalancing transactions within certain asset allocation or "wrap" programs where the financial intermediary maintaining a shareholder account is able to identify the transaction as part of an asset allocation program approved by Funds Management;
- Transactions initiated by a "fund of funds" or Section 529 Plan into an underlying fund investment;
- Permitted exchanges between share classes of the same Fund;
- Certain transactions involving participants in employer-sponsored retirement plans, including: participant withdrawals due to mandatory distributions, rollovers and hardships, withdrawals of shares acquired by participants through payroll deductions, and shares acquired or sold by a participant in connection with plan loans; and
- Purchases below \$5,000 (including purchases that are part of an exchange transaction).

**The money market funds and the Ultra-Short Funds.** Because the money market funds and Ultra-Short Funds are often used for short-term investments, they are designed to accommodate more frequent purchases and redemptions than the Covered Funds. As a result, the money market funds and Ultra-Short Funds do not anticipate that frequent purchases and redemptions, under normal circumstances, will have significant adverse consequences to the money market funds or Ultra-Short Funds or their shareholders. Although the money market funds and Ultra-Short Funds do not prohibit frequent trading, Funds Management will seek to prevent an investor from utilizing the money market funds and Ultra-Short Funds to facilitate frequent purchases and redemptions of shares in the Covered Funds in contravention of the policies and procedures adopted by the Covered Funds.

**All Wells Fargo Advantage Funds.** In addition, Funds Management reserves the right to accept purchases, redemptions and exchanges made in excess of applicable trading restrictions in designated accounts held by Funds Management or its affiliate that are used at all times exclusively for addressing operational matters related to shareholder accounts, such as testing of account functions, and are maintained at low balances that do not exceed specified dollar amount limitations.

In the event that an asset allocation or "wrap" program is unable to implement the policy outlined above, Funds Management may grant a program-level exception to this policy. A financial intermediary relying on the exception is required to provide Funds Management with specific information regarding its program and ongoing information about its program upon request.

A financial intermediary through whom you may purchase shares of the Fund may independently attempt to identify excessive trading and take steps to deter such activity. As a result, a financial intermediary may on its own limit or permit trading activity of its customers who invest in Fund shares using standards different from the standards used by Funds Management and discussed in this Prospectus. Funds Management may permit a financial intermediary to enforce its own internal policies and procedures concerning frequent trading rather than the policies set forth above in instances where Funds Management reasonably believes that the intermediary's policies and procedures effectively discourage disruptive trading activity. If you purchase Fund shares through a financial intermediary, you should contact the intermediary for more information about whether and how restrictions or limitations on trading activity will be applied to your account.

# Account Policies

---

## Automatic Plans

These plans help you conveniently purchase and/or redeem shares each month. Once you select a plan, tell us the day of the month you would like the transaction to occur. If you do not specify a date, we will process the transaction on or about the 25th day of the month. Call Investor Services at 1-800-222-8222 for more information.

- **Automatic Investment Plan** —With this plan, you can regularly purchase shares of a Wells Fargo Advantage Fund with money automatically transferred from a linked bank account.
- **Automatic Exchange Plan** —With this plan, you can regularly exchange shares of a Wells Fargo Advantage Fund you own for shares of another Wells Fargo Advantage Fund. See the “How to Exchange Shares” section of this Prospectus for the conditions that apply to your shares. In addition, each transaction in an Automatic Exchange Plan must be for a minimum of \$100. This feature may not be available for certain types of accounts.
- **Systematic Withdrawal Plan** —With this plan, you can regularly redeem shares and receive the proceeds by check or by transfer to a linked bank account. To participate in this plan, you:
  - must have a Fund account valued at \$10,000 or more;
  - must request a minimum redemption of \$100;
  - must have your distributions reinvested; and
  - may not simultaneously participate in the Automatic Investment Plan.
- **Payroll Direct Deposit** —With this plan, you may transfer all or a portion of your paycheck, social security check, military allotment, or annuity payment for investment into the Fund of your choice.

It generally takes about ten business days to establish a plan once we have received your instructions. It generally takes about five business days to change or cancel participation in a plan. We may automatically cancel your plan if the linked bank account you specified is closed, or for other reasons.

## Householding

To help keep Fund expenses low, a single copy of a prospectus or shareholder report may be sent to shareholders of the same household. If your household currently receives a single copy of a prospectus or shareholder report and you would prefer to receive multiple copies, please contact your financial intermediary.

## Retirement Accounts

We offer prototype documents for a variety of retirement accounts for individuals and small businesses. Please call 1-800-222-8222 for information on:

- Individual Retirement Plans, including Traditional IRAs and Roth IRAs.
- Qualified Retirement Plans, including Simple IRAs, SEP IRAs, Keoghs, Pension Plans, Profit-Sharing Plans, and 401(k) Plans.

There may be special distribution requirements for a retirement account, such as required distributions or mandatory Federal income tax withholdings. For more information, call the number listed above. For retirement accounts held directly with the Fund, certain fees may apply, including an annual account maintenance fee.

## Small Account Redemptions

We reserve the right to redeem certain accounts that fall below the minimum initial investment amount as the result of shareholder redemptions (as opposed to market movement). Before doing so, we will give you approximately 60 days to bring your account above the minimum investment amount. Please call Investor Services at 1-800-222-8222 or contact your selling agent for further details.

## Statements and Confirmations

Statements summarizing activity in your account are mailed quarterly. Confirmations are mailed following each purchase, sale, exchange, or transfer of Fund shares, except generally for Automatic Investment Plan transactions, Systematic Withdrawal Plan transactions using Electronic Funds Transfer, and purchases of new shares through the automatic reinvestment of distributions. Upon your request and for the applicable fee, you may obtain a reprint of an account statement. Please call Investor Services at 1-800-222-8222 for more information.

## Electronic Delivery of Fund Documents

You may elect to receive your Fund prospectuses, shareholder reports and other Fund documents electronically in lieu of paper form by enrolling on the Fund's Web site at [wellsfargo.com/advantagedelivery](http://wellsfargo.com/advantagedelivery). If you make this election, you will be notified by e-mail when the most recent Fund documents are available for electronic viewing and downloading.

To receive Fund documents electronically, you must have an e-mail account and an internet browser that meets the requirements described in the Privacy & Security section of the Fund's Web site at [wellsfargoadvantagefunds.com](http://wellsfargoadvantagefunds.com). You may change your electronic delivery preferences or revoke your election to receive Fund documents electronically at any time by visiting [wellsfargo.com/advantagedelivery](http://wellsfargo.com/advantagedelivery).

### **Statement Inquiries**

Contact us in writing regarding any errors or discrepancies noted on your account statement within 60 days after the date of the statement confirming a transaction. We may deny your ability to refute a transaction if we do not hear from you within those 60 days.

### **Transaction Authorizations**

Telephone, electronic, and clearing agency privileges allow us to accept transaction instructions by anyone representing themselves as the shareholder and who provides reasonable confirmation of their identity. Neither we nor *Wells Fargo Advantage Funds* will be liable for any losses incurred if we follow such instructions we reasonably believe to be genuine. For transactions through the automated phone system and our Web site, we will assign personal identification numbers (PINs) and/or passwords to help protect your account information. To safeguard your account, please keep your PINs and passwords confidential. Contact us immediately if you believe there is a discrepancy on your confirmation statement or if you believe someone has obtained unauthorized access to your account, PIN or password.

### **USA PATRIOT Act**

In compliance with the USA PATRIOT Act, all financial institutions (including mutual funds) at the time an account is opened, are required to obtain, verify and record the following information for all registered owners or others who may be authorized to act on the account: full name, date of birth, taxpayer identification number (usually your Social Security Number), and permanent street address. Corporate, trust and other entity accounts require additional documentation. This information will be used to verify your identity. We will return your application if any of this information is missing, and we may request additional information from you for verification purposes. In the rare event that we are unable to verify your identity, we reserve the right to redeem your account at the current day's NAV. You will be responsible for any losses, taxes, expenses, fees, or other results of such a redemption.

# Distributions

---

The Fund generally makes distributions of any net investment income and any realized net capital gains at least annually. Please note, distributions have the effect of reducing the NAV per share by the amount distributed.

We offer the following distribution options. To change your current option for payment of distributions, please call 1-800-222-8222.

- **Automatic Reinvestment Option**—Allows you to buy new shares of the same class of the Fund that generated the distributions. The new shares are purchased at NAV generally on the day the distribution is paid. This option is automatically assigned to your account unless you specify another option.
- **Check Payment Option**—Allows you to have checks for distributions mailed to your address of record or to another name and address which you have specified in written instructions. A medallion guarantee may also be required. If checks remain uncashed for six months or are undeliverable by the Post Office, we will reinvest the distributions at the earliest date possible, and future distributions will be automatically reinvested.
- **Bank Account Payment Option**—Allows you to receive distributions directly in a checking or savings account through Electronic Funds Transfer. The bank account must be linked to your Wells Fargo Advantage Fund account. Any distribution returned to us due to an invalid banking instruction will be sent to your address of record by check at the earliest date possible, and future distributions will be automatically reinvested.
- **Directed Distribution Purchase Option**—Allows you to buy shares of a different Wells Fargo Advantage Fund of the same share class. The new shares are purchased at NAV generally on the day the distribution is paid. In order to establish this option, you need to identify the Fund and account the distributions are coming from, and the Fund and account to which the distributions are being directed. You must meet any required minimum purchases in both Funds prior to establishing this option.

# Taxes

---

The following discussion regarding federal income taxes is based on laws that were in effect as of the date of this Prospectus and summarizes only some of the important federal income tax considerations affecting a Fund and you as a shareholder. It does not apply to foreign or tax-exempt shareholders or those holding Fund shares through a tax-advantaged account, such as a 401(k) Plan or IRA. This discussion is not intended as a substitute for careful tax planning. You should consult your tax adviser about your specific tax situation. Please see the Statement of Additional Information for additional federal income tax information.

We will pass on to a Fund's shareholders substantially all of the Fund's net investment income and realized net capital gains, if any. Distributions from a Fund's ordinary income and net short-term capital gain, if any, generally will be taxable to you as ordinary income. Distributions from a Fund's net long-term capital gain, if any, generally will be taxable to you as long-term capital gain.

Corporate shareholders may be able to deduct a portion of their distributions when determining their taxable income.

The American Taxpayer Relief Act of 2012 extended certain tax rates except those that applied to individual taxpayers with taxable incomes above \$400,000 (\$450,000 for married taxpayers, \$425,000 for heads of households). Taxpayers that are not in the new highest tax bracket continue to be subject to a maximum 15% rate of tax on long-term capital gains and qualified dividends. For taxpayers in the new highest tax bracket, the maximum tax rate on long-term capital gains and qualified dividends will be 20%. Beginning in 2013, U.S. individuals with income exceeding \$200,000 (\$250,000 if married and filing jointly), a new 3.8% Medicare contribution tax will apply on "net investment income," including interest, dividends, and capital gains.

Distributions from a Fund normally will be taxable to you when paid, whether you take distributions in cash or automatically reinvest them in additional Fund shares. Following the end of each year, we will notify you of the federal income tax status of your distributions for the year.

If you buy shares of a Fund shortly before it makes a taxable distribution, your distribution will, in effect, be a taxable return of part of your investment. Similarly, if you buy shares of a Fund when it holds appreciated securities, you will receive a taxable return of part of your investment if and when the Fund sells the appreciated securities and distributes the gain. A Fund has built up, or has the potential to build up, high levels of unrealized appreciation.

Your redemptions (including redemptions in-kind) and exchanges of Fund shares ordinarily will result in a taxable capital gain or loss, depending on the amount you receive for your shares (or are deemed to receive in the case of exchanges) and the amount you paid (or are deemed to have paid) for them. Such capital gain or loss generally will be long-term capital gain or loss if you have held your redeemed or exchanged Fund shares for more than one year at the time of redemption or exchange. In certain circumstances, losses realized on the redemption or exchange of Fund shares may be disallowed.

In certain circumstances, Fund shareholders may be subject to backup withholding taxes.

## Description of Underlying Funds

The following information has been provided to the Fund by GMO and the underlying funds in which Benchmark-Free Allocation Fund invests. These summaries are qualified in their entirety by reference to the prospectus and SAI of each underlying fund. None of these funds are offered in this Prospectus.

GMO may change the investment policies and/or programs of the underlying funds at any time without notice to shareholders of the Fund. Each of the underlying funds is subject to some or all of the risks detailed in this prospectus under "Description of Principal Investment Risks." For a definition of each underlying fund's benchmark, see "Fund Structure and Underlying Funds" in the Fund's Statement of Additional Information. References below to the "Manager" are to GMO.

### GMO U.S. Equity Funds

The GMO U.S. Equity Funds normally do not take temporary defensive positions. To the extent a GMO Fund takes a temporary defensive position, or otherwise holds cash, cash equivalents, or high quality debt investments on a temporary basis, the GMO Fund may not achieve its investment objective.

Fund Name and Benchmark	Investment Goal/Strategy
<b>GMO U.S. Core Equity Fund</b> S&P 500 Index	Seeks high total return. The Manager seeks to achieve the Fund's investment objective by investing the Fund's portfolio primarily in equity securities that the Manager believes will provide a higher return than the S&P 500 Index. The Manager determines which securities the Fund should buy or sell based on its evaluation of companies' published financial information and corporate behavior, securities' prices, equity and bond markets, and the overall economy. In selecting securities for the Fund, the Manager uses a combination of investment methods to identify securities that the Manager believes have positive return potential relative to other securities in the Fund's investment universe. Some of these methods evaluate individual securities or groups of securities based on the ratio of their price to historical financial information and forecasted financial information, such as book value, cash flow and earnings, and a comparison of these ratios to industry or market averages or to their own history. Other methods focus on patterns of information, such as price movement or volatility of a security or groups of securities relative to the Fund's investment universe or corporate behavior of an issuer. The Manager also adjusts the Fund's portfolio for factors such as position size, industry and sector exposure, and market capitalization. The factors considered and investment methods used by the Manager can change over time. The Fund may invest in companies of any market capitalization. As a substitute for direct investments in equity securities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, and swap contracts. In addition, the Fund may lend its portfolio securities. Under normal circumstances, the Fund invests directly and indirectly (e.g., through underlying funds or derivatives) at least 80% of its assets in equity investments tied economically to the U.S. The terms "equity securities" and "equity investments" refer to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.

## GMO Fixed Income Funds

If deemed prudent by the Manager, the GMO Fixed Income Funds (other than GMO Short-Duration Collateral Fund and GMO U.S. Treasury Fund) may take temporary defensive positions. Many of the GMO Fixed Income Funds have previously taken temporary defensive positions and have exercised the right to honor redemption requests in-kind. To the extent a GMO Fund takes temporary defensive positions or otherwise holds cash, cash equivalents, or high quality debt investments on a temporary basis, the GMO Fund may not achieve its investment objective. With respect to the GMO Fixed Income Funds' investments, the term "investment grade" refers to a rating of Baa3/P-2 or better by Moody's Investors Service, Inc. ("Moody's") or BBB-/A-2 or better by Standard & Poor's Ratings Services ("S&P") and the term "below investment grade" refers to any rating below Baa3/P-2 given by Moody's or below BBB-/A-2 given by S&P. Fixed income securities rated below investment grade are commonly referred to as high yield or "junk" bonds. In addition, securities and commercial paper that are rated Aa/P-1 or better by Moody's or AA/A-1 or better by S&P are sometimes referred to as "high quality." Securities referred to as investment grade, below investment grade, or high quality include not only securities rated by Moody's and/or S&P, but also unrated securities that the Manager determines have comparable credit qualities.

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Asset Allocation Bond Fund</b> Citigroup 3-Month Treasury Bill Index</p>	<p>Seeks total return in excess of that of its benchmark. The Manager pursues investment strategies for the Fund that are intended to complement the strategies being pursued by the Manager in GMO Asset Allocation Funds or accounts. Accordingly, the Fund is not a standalone investment and the Fund's investment returns may be more volatile than a standalone investment vehicle. The Manager uses multi-year forecasts of returns and risk to determine the Fund's strategic direction. The factors considered and investment methods used by the Manager can change over time. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is permitted to invest in bonds of any kind (e.g., bonds of any maturity, duration, or credit quality). The Fund may invest in any sector of the bond market and is not required to maintain a minimum or maximum allocation of investments in any one sector. The sectors and types of bonds in which the Fund may invest include, but are not limited to: investment grade bonds denominated in various currencies, including bonds issued by the U.S. and non-U.S. governments and their agencies or instrumentalities (whether or not guaranteed or insured by those governments), corporations and municipalities (taxable and tax-exempt); below investment grade bonds (commonly referred to as "junk bonds"); inflation indexed bonds issued by the U.S. government (including Inflation-Protected Securities issued by the U.S. Treasury (TIPS)) and non-U.S. governments and their agencies or instrumentalities (whether or not guaranteed or insured by those governments) and inflation indexed bonds issued by corporations; sovereign debt of emerging countries and other bonds issued in emerging countries (including junk bonds); and asset-backed securities, including mortgage related and mortgage-backed securities. The Fund also may invest in exchange-traded and over-the-counter ("OTC") derivatives, including futures contracts, currency options, currency forwards, reverse repurchase agreements, swap contracts (including credit default swaps), interest rate options, swaps on interest rates and other types of derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund may gain exposure to the investments described above by investing in shares of other GMO Funds, including GMO High Quality Short-Duration Bond Fund (to seek a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments) and GMO Debt Opportunities Fund (to gain exposure to global credit markets). The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. The Fund may invest up to 100% of its assets in junk bonds. The Manager does not seek to maintain a specified interest rate duration for the Fund, and the Fund's interest rate duration will change depending on the Fund's investments and the Manager's assessment of different sectors of the bond market.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Asset Allocation International Bond Fund</b> J.P. Morgan GBI Global ex U.S.</p>	<p>Seeks total return in excess of that of its benchmark. The Manager pursues investment strategies for the Fund that are intended to complement the strategies being pursued by the Manager in GMO Asset Allocation Funds or accounts. Accordingly, the Fund is not a standalone investment and the Fund's investment returns may be more volatile than a standalone investment vehicle. The Manager uses multi-year forecasts of returns and risk to determine the Fund's strategic direction. The factors considered and investment methods used by the Manager can change over time. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is permitted to invest in bonds of any kind (e.g., bonds of any maturity, duration, or credit quality). While the Fund principally invests in non-U.S. bonds, it may invest in any sector of the bond market and is not required to maintain a minimum or maximum allocation of investments in any one sector. The sectors and types of bonds in which the Fund may invest include, but are not limited to: non-U.S. government securities and other investment grade bonds denominated in various currencies, including bonds issued by the U.S. government, and their agencies or instrumentalities (whether or not guaranteed or insured by those governments), corporations and municipalities (taxable and tax-exempt); below investment grade bonds (commonly referred to as "junk bonds"); inflation indexed bonds issued by non-U.S. governments and the U.S. government (including Inflation-Protected Securities issued by the U.S. Treasury (TIPS)) and their agencies or instrumentalities (whether or not guaranteed or insured by those governments) and inflation indexed bonds issued by corporations; sovereign debt of emerging countries and other bonds issued in emerging countries (including junk bonds); and asset-backed securities, including mortgage related and mortgage-backed securities. The Fund also may invest in exchange-traded and over-the-counter ("OTC") derivatives, including futures contracts, currency options, currency forwards, reverse repurchase agreements, swap contracts (including credit default swaps), interest rate options, swaps on interest rates and other types of derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund may gain exposure to the investments described above by investing in shares of other GMO Funds, including GMO High Quality Short-Duration Bond Fund (to seek a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments) and GMO Debt Opportunities Fund (to gain exposure to global credit markets). The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. The Fund may invest up to 100% of its assets in junk bonds. The Manager does not seek to maintain a specified interest rate duration for the Fund, and the Fund's interest rate duration will change depending on the Fund's investments and the Manager's assessment of different sectors of the bond market.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Core Plus Bond Fund</b> Barclays U.S. Aggregate Index</p>	<p>Seeks total return in excess of that of its benchmark. The Fund's investment program has two principal components. One component seeks to replicate the Fund's benchmark. The second component seeks to add value relative to the Fund's benchmark by taking positions that are unrelated to its benchmark. These positions primarily include global interest rate and currency derivatives and indirect (through other GMO Funds) and direct credit investments in asset-backed, government and emerging country debt markets, and can cause the Fund's performance to differ significantly from that of its benchmark. In deciding what positions to take in global interest rate and currency markets and the size of those positions, the Manager considers fundamental factors (e.g., inflation and current account positions) as well as price-based factors (e.g., interest and exchange rates). The Manager assesses the relative values across global interest rate and currency markets and the merits of overweighting or underweighting particular positions. The Manager also may consider the relative attractiveness of yield curve and duration positions in these markets. In making decisions regarding credit investments, the Manager uses fundamental investment techniques to assess the expected performance of each investment relative to the Fund's benchmark. The factors considered and investment methods used by the Manager can change over time. In pursuing its investment program, the Fund may have positions in: derivatives, including without limitation, futures contracts, currency options, interest rate options, currency forwards, reverse repurchase agreements, credit default swaps and other swap contracts (to generate a return comparable to the Fund's benchmark and to pursue risk and return in global interest rate, currency, and credit markets); bonds denominated in various currencies, including non-U.S. and U.S. government bonds, asset-backed securities issued by non-U.S. governments and U.S. government agencies (whether or not guaranteed or insured by those governments), corporate bonds, and mortgage-backed and other asset-backed securities issued by private issuers; shares of GMO Short-Duration Collateral Fund ("SDCF") (to provide exposure to asset-backed securities); shares of GMO World Opportunity Overlay Fund ("Overlay Fund") (to provide exposure to the global interest rate, currency, and credit (including, asset-backed) markets); shares of GMO Emerging Country Debt Fund ("ECDF") (to provide exposure to emerging country debt securities); shares of GMO U.S. Treasury Fund and unaffiliated money market funds; shares of GMO High Quality Short-Duration Bond Fund (to seek to generate a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments); and shares of GMO Debt Opportunities Fund (to provide exposure to global credit (particularly, asset-backed) markets). As a result primarily of its investment in shares of SDCF, Overlay Fund and ECDF, the Fund has and is expected to continue to have material exposure to U.S. asset-backed and emerging country debt securities that are below investment grade. The Manager normally seeks to maintain the Fund's estimated interest rate duration within +/- 2 years of the benchmark's duration (approximately 5.5 years as of 5/31/13). Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Currency Hedged International Bond Fund</b>  J.P. Morgan GBI Global ex Japan ex U.S. (Hedged)</p>	<p>Seeks total return in excess of that of its benchmark. The Fund's investment program has two principal components. One component seeks to replicate the Fund's benchmark. The second component seeks to add value relative to the Fund's benchmark by taking positions that are not necessarily related to its benchmark. These positions primarily include global interest rate and currency derivatives and indirect (through other GMO Funds) and direct credit investments in asset-backed, government and emerging country debt markets, and can cause the Fund's performance to differ significantly from that of its benchmark. The Fund will typically have substantial direct and indirect investment exposure to the countries (e.g., United Kingdom) and regions (e.g., Eurozone) that represent a significant portion of the Fund's benchmark. In deciding what positions to take in global interest rate and currency markets and the size of those positions, the Manager considers fundamental factors (e.g., inflation and current account positions) as well as price-based factors (e.g., interest and exchange rates). The Manager assesses the relative values across global interest rate and currency markets and the merits of overweighting or underweighting particular positions. The Manager also may consider the relative attractiveness of yield curve and duration positions in these markets. In making decisions regarding credit investments, the Manager uses fundamental investment techniques to assess the expected performance of each investment relative to the Fund's benchmark. The factors considered and investment methods used by the Manager can change over time. In pursuing its investment program, the Fund may have positions in: derivatives, including without limitation, futures contracts, currency options, interest rate options, currency forwards, reverse repurchase agreements, credit default swaps, and other swap contracts (to generate a return comparable to the Fund's benchmark and to pursue risk and return in global interest rate, currency, and credit markets); bonds denominated in various currencies, including non-U.S. and U.S. government bonds, asset-backed securities issued by non-U.S. governments and U.S. government agencies (whether or not guaranteed or insured by those governments), corporate bonds, and mortgage-backed and other asset-backed securities issued by private issuers; shares of GMO Short-Duration Collateral Fund ("SDCF") (to provide exposure to asset-backed securities); shares of GMO World Opportunity Overlay Fund ("Overlay Fund") (to provide exposure to the global interest rate, currency, and credit (including, asset-backed) markets); shares of GMO Emerging Country Debt Fund ("ECDF") (to provide exposure to emerging country debt securities); shares of GMO U.S. Treasury Fund and unaffiliated money market funds; shares of GMO High Quality Short-Duration Bond Fund (to seek to generate a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments); and shares of GMO Debt Opportunities Fund (to provide exposure to global credit (particularly, asset-backed) markets). The Fund generally attempts to hedge at least 75% of its net non-U.S. currency exposure into U.S. dollars. As a result primarily of its investment in shares of SDCF, Overlay Fund, and ECDF, the Fund has and is expected to continue to have material exposure to U.S. asset-backed and emerging country debt securities that are below investment grade. The Manager normally seeks to maintain the Fund's estimated interest rate duration within +/- 2 years of the benchmark's duration (approximately 7.0 years as of 5/31/13). Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Debt Opportunities Fund</b> N/A	<p>The Fund's investment objective is positive total return. The Fund invests primarily in debt investments and is not restricted in its exposure to any type of debt investment, without regard to credit rating. The Fund may invest in debt investments issued by a wide range of private issuers and by federal, state, local, and non-U.S. governments (whether or not guaranteed or insured by those governments). The Fund may invest in asset-backed securities, including, but not limited to, securities backed by pools of residential and commercial mortgages, credit-card receivables, home equity loans, automobile loans, educational loans, corporate and sovereign bonds, and bank loans made to corporations. In addition, the Fund may invest in corporate debt securities, money market instruments, and commercial paper, and enter into credit default swaps, reverse repurchase agreements, and repurchase agreements. The Fund also may use other exchange-traded and over-the-counter ("OTC") derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund may have gross investment exposures in excess of its net assets (i.e., the Fund may be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund's debt investments may include all types of interest rate, payment, and reset terms, including fixed rate, adjustable rate, zero coupon, contingent, deferred, payment-in-kind, and auction rate features. The Fund may invest in securities of any credit quality and has no limit on how much it may invest in below investment grade securities (commonly referred to as "junk bonds"). The Fund typically invests substantially all of its assets in asset-backed securities, a substantial portion of which are below investment grade. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. In selecting debt investments for the Fund's portfolio, the Manager emphasizes issue selection in its investment process, which involves examination of various sectors of structured product. The Manager uses analytical techniques to seek to find relative value among sectors and individual securities. The factors considered and investment methods used by the Manager can change over time. The Fund does not maintain a specified interest rate duration for its portfolio. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in debt investments.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Emerging Country Debt Fund</b> J.P. Morgan EMBI Global</p>	<p>Seeks total return in excess of that of its benchmark. The Fund invests primarily in debt of emerging countries that is issued by a sovereign or its instrumentalities outside the country of the issuer and usually is denominated in the currency of the country in which it is issued (e.g., U.S. dollar, Euro, Japanese yen, Swiss franc and British pound sterling). Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in debt investments tied economically to emerging countries. The term "emerging countries" means the world's less developed countries. In general, the Fund considers "emerging countries" to be the countries included in the Fund's benchmark, as well as other countries with similar national income characteristics. The Fund typically gains its investment exposure by purchasing debt investments or by using derivatives, typically credit default swaps. The Fund maintains a substantial portion of its assets either through direct holdings or indirectly through derivatives in below investment grade debt investments (commonly referred to as "junk bonds"). Those investments have speculative characteristics and are riskier than investment grade debt investments. Generally, at least 75% of the Fund's assets are denominated in, or hedged into, U.S. dollars. The Fund's performance is likely to be more volatile than that of its benchmark. The Manager emphasizes a bottom-up approach to select debt issued by sovereign and quasi-sovereign entities, using analytical techniques that seek to uncover the most undervalued instrument (s) issued by a particular sovereign or quasi-sovereign entity. The Manager also considers its outlook for a country in making investment decisions and typically uses portfolio cash flows to rebalance the Fund's portfolio. The factors considered and investment methods used by the Manager can change over time. In pursuing its investment objective, the Fund typically uses exchange-traded and over-the-counter (OTC) derivatives, including options, swap contracts (in addition to credit default swaps), currency forwards (including currency forwards on currencies of the developed markets), reverse repurchase agreements and futures. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund also has direct and indirect holdings in U.S. asset-backed securities. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. The Manager normally seeks to maintain an interest rate duration for the Fund that is similar to that of its benchmark (approximately 7.1 years as of 5/31/13).</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Global Bond Fund</b> J.P. Morgan GBI Global</p>	<p>Seeks total return in excess of that of its benchmark. The Fund's investment program has two principal components. One component seeks to replicate the Fund's benchmark. The second component seeks to add value relative to the Fund's benchmark by taking positions that are not necessarily related to its benchmark. These positions primarily include global interest rate and currency derivatives and indirect (through other GMO Funds) and direct credit investments in asset-backed, government and emerging country debt markets, and can cause the Fund's performance to differ significantly from that of its benchmark. The Fund will typically have substantial direct and indirect investment exposure to the countries (e.g., Japan) and regions (e.g., Eurozone) that represent a significant portion of the Fund's benchmark. In deciding what positions to take in global interest rate and currency markets and the size of those positions, the Manager considers fundamental factors (e.g., inflation and current account positions) as well as price-based factors (e.g., interest and exchange rates). The Manager assesses the relative values across global interest rate and currency markets and the merits of overweighting or underweighting particular positions. The Manager also may consider the relative attractiveness of yield curve and duration positions in these markets. In making decisions regarding credit investments, the Manager uses fundamental investment techniques to assess the expected performance of each investment relative to the Fund's benchmark. The factors considered and investment methods used by the Manager can change over time. In pursuing its investment program, the Fund may have positions in: derivatives, including without limitation, futures contracts, currency options, interest rate options, currency forwards, reverse repurchase agreements, credit default swaps and other swap contracts (to generate a return comparable to the Fund's benchmark and to pursue risk and return in global interest rate, currency, and credit markets); non-U.S. bonds and other bonds denominated in various currencies, including non-U.S. and U.S. government bonds, asset-backed securities issued by non-U.S. governments and U.S. government agencies (whether or not guaranteed or insured by those governments), corporate bonds, and mortgage-backed and other asset-backed securities issued by private issuers; shares of GMO Short-Duration Collateral Fund ("SDCF") (to provide exposure to asset-backed securities); shares of GMO World Opportunity Overlay Fund ("Overlay Fund") (to provide exposure to the global interest rate, currency, and credit (including, asset-backed) markets); shares of GMO Emerging Country Debt Fund ("ECDF") (to provide exposure to emerging country debt securities); shares of GMO U.S. Treasury Fund and unaffiliated money market funds; shares of GMO High Quality Short-Duration Bond Fund (to seek to generate a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments); and shares of GMO Debt Opportunities Fund (to provide exposure to global credit (particularly, asset-backed) markets). As a result primarily of its investment in shares of SDCF, Overlay Fund and ECDF, the Fund has and is expected to continue to have material exposure to U.S. asset-backed and emerging country debt securities that are below investment grade. The Manager normally seeks to maintain the Fund's estimated interest rate duration within +/- 2 years of the benchmark's duration (approximately 6.8 years as of 5/31/13). Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO High Quality Short-Duration Bond Fund</b>  J.P. Morgan U.S. 3 Month Cash Index</p>	<p>The Fund's investment objective is total return in excess of that of its benchmark. The Fund seeks to add value relative to its benchmark to the extent consistent with the preservation of capital and liquidity. The Fund will invest primarily in high quality U.S. and non-U.S. fixed income securities. The Fund may invest in fixed income securities of any type, including asset-backed securities, corporate debt securities, money market instruments, and commercial paper, and enter into credit default swaps, reverse repurchase agreements, and repurchase agreements. The Fund also may use other exchange-traded and over-the-counter ("OTC") derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund's fixed income securities may include all types of interest rate, payment, and reset terms, including adjustable rate, fixed rate, zero coupon, contingent, deferred, payment-in-kind, and auction rate features. While the Fund primarily invests in high quality bonds, it may invest in securities that are not high quality and may hold bonds and other fixed income securities whose ratings after they were acquired were reduced below high quality. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. In selecting fixed income securities for the Fund's portfolio, the Manager focuses primarily on the securities' credit quality. The Manager uses fundamental investment techniques to identify the credit risk associated with investments in fixed income securities and bases its investment decisions on that assessment. The factors considered and investment methods used by the Manager can change over time. The Manager will normally seek to maintain an estimated interest rate duration of 365 days or less for the Fund's portfolio (which may be substantially shorter than the Fund's dollar-weighted average portfolio maturity). The Manager estimates the Fund's dollar-weighted average interest rate duration by aggregating the durations of the Fund's direct and indirect individual holdings and weighting each holding based on its market value. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in high quality bonds.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO International Bond Fund</b> J.P. Morgan GBI Global ex U.S.</p>	<p>Seeks total return in excess of that of its benchmark. The Fund's investment program has two principal components. One component seeks to replicate the Fund's benchmark. The second component seeks to add value relative to the Fund's benchmark by taking positions that are not necessarily related to its benchmark. These positions primarily include global interest rate and currency derivatives and indirect (through other GMO Funds) and direct credit investments in asset-backed, government and emerging country debt markets, and can cause the Fund's performance to differ significantly from that of its benchmark. The Fund will typically have substantial direct and indirect investment exposure to the countries (e.g., Japan) and regions (e.g., Eurozone) that represent a significant portion of the Fund's benchmark. In deciding what positions to take in global interest rate and currency markets and the size of those positions, the Manager considers fundamental factors (e.g., inflation and current account positions) as well as price-based factors (e.g., interest and exchange rates). The Manager assesses the relative values across global interest rate and currency markets and the merits of overweighting or underweighting particular positions. The Manager also may consider the relative attractiveness of yield curve and duration positions in these markets. In making decisions regarding credit investments, the Manager uses fundamental investment techniques to assess the expected performance of each investment relative to the Fund's benchmark. The factors considered and investment methods used by the Manager can change over time. In pursuing its investment program, the Fund may have positions in: derivatives, including without limitation, futures contracts, currency options, interest rate options, currency forwards, reverse repurchase agreements, credit default swaps, and other swap contracts (to generate a return comparable to the Fund's benchmark and to pursue risk and return in global interest rate, currency, and credit markets); non-U.S. bonds and other bonds denominated in various currencies, including non-U.S. and U.S. government bonds, asset-backed securities issued by non-U.S. governments and U.S. government agencies (whether or not guaranteed or insured by those governments), corporate bonds, and mortgage-backed and other asset-backed securities issued by private issuers; shares of GMO Short-Duration Collateral Fund ("SDCF") (to provide exposure to asset-backed securities); shares of GMO World Opportunity Overlay Fund ("Overlay Fund") (to provide exposure to the global interest rate, currency, and credit (including, asset-backed) markets); shares of GMO Emerging Country Debt Fund ("ECDF") (to provide exposure to emerging country debt securities); shares of GMO U.S. Treasury Fund and unaffiliated money market funds; shares of GMO High Quality Short-Duration Bond Fund (to seek to generate a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments); and shares of GMO Debt Opportunities Fund (to provide exposure to global credit (particularly, asset-backed) markets). As a result primarily of its investment in shares of SDCF, Overlay Fund and ECDF, the Fund has and is expected to continue to have material exposure to U.S. asset-backed and emerging country debt securities that are below investment grade. The Manager normally seeks to maintain the Fund's estimated interest rate duration within +/- 2 years of the benchmark's duration (approximately 7.4 years as of 5/31/13). Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in bonds. The term "bond" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Short-Duration Collateral Fund ("SDCF") (effective on or about February 12, 2014, name will change to GMO Debt Opportunities Fund")</b> J.P. Morgan U.S. 3 Month Cash Index</p>	<p>Seeks total return comparable to that of its benchmark. As of the date of this Prospectus, the Fund is not pursuing an active investment program and is gradually liquidating its portfolio. The Fund primarily holds asset-backed securities, including, but not limited to, securities backed by pools of residential and commercial mortgages, credit-card receivables, home equity loans, automobile loans, educational loans, corporate and sovereign bonds and bank loans made to corporations. In addition, the Fund holds government securities, corporate debt securities and money market instruments. The Fund also may invest in unaffiliated money market funds. Because of the deterioration in credit markets that became acute in 2008, the Fund currently has and is expected to continue to have material exposure to below investment grade securities. The Manager does not seek to maintain a specified interest rate duration for the Fund. Since October 2008, the Fund has declared and paid distributions when it has acquired a meaningful cash position rather than reinvesting that cash in portfolio securities. The Fund currently intends to continue this practice. A substantial portion of any such distributions could constitute a return of capital to shareholders for tax purposes. See "Taxes" above for more information on the tax implications of such distributions. <b>Effective on or about February 12, 2014, the Fund will seek positive total return. The Fund will invest primarily in debt investments and is not restricted in its exposure to any type of debt investment, without regard to credit rating. The Fund may invest in debt investments issued by a wide range of private issuers and by federal, state, local, and non-U.S. governments (whether or not guaranteed or insured by those governments). The Fund may invest in asset-backed securities, including, but not limited to, securities backed by pools of residential and commercial mortgages, credit-card receivables, home equity loans, automobile loans, educational loans, corporate and sovereign bonds, and bank loans made to corporations. In addition, the Fund may invest in corporate debt securities, money market instruments, and commercial paper, and enter into credit default swaps, reverse repurchase agreements, and repurchase agreements. The Fund also may use other exchange-traded and over-the-counter ("OTC") derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund may have gross investment exposures in excess of its net assets (i.e., the Fund may be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund's debt investments may include all types of interest rate, payment, and reset terms, including fixed rate, adjustable rate, zero coupon, contingent, deferred, payment-in-kind, and auction rate features. The Fund may invest in securities of any credit quality and has no limit on how much it may invest in below investment grade securities (commonly referred to as "junk bonds"). The Fund typically invests substantially all of its assets in asset-backed securities, a substantial portion of which are below investment grade. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. In selecting debt investments for the Fund's portfolio, the Manager emphasizes issue selection in its investment process, which involves examination of various sectors of structured product. The Manager uses analytical techniques to seek to find relative value among sectors and individual securities. The factors considered and investment methods used by the Manager can change over time. The Fund does not maintain a specified interest rate duration for its portfolio. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in debt investments.</b></p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Strategic Fixed Income Fund</b> J.P. Morgan U.S. 3 Month Cash Index</p>	<p>Seeks total return in excess of that of its benchmark. The Manager pursues investment strategies for the Fund that are intended to complement the strategies being pursued by the Manager in GMO Asset Allocation Funds or accounts. Accordingly, the Fund is not a standalone investment and the Fund's investment returns may be more volatile than a standalone investment vehicle. The Manager uses multi-year forecasts of returns and risk to determine the Fund's strategic direction. The factors considered and investment methods used by the Manager can change over time. Under normal circumstances, the Fund invests directly and indirectly (e.g., through other GMO Funds or derivatives) at least 80% of its assets in fixed income securities. The term "fixed income security" includes (i) obligations of an issuer to make payments of principal and/or interest (whether fixed or variable) on future dates and (ii) synthetic debt instruments created by the Manager by using derivatives (e.g., a futures contract, swap contract, currency forward, or option). The Fund is permitted to invest in fixed income securities of any kind (e.g., fixed income securities of any maturity, duration or credit quality). The Fund may invest in any sector of the fixed income market and is not required to maintain a minimum or maximum allocation of investments in any one sector. The Fund may invest all of its assets in below investment grade securities (commonly referred to as "junk bonds"). The sectors and types of fixed income securities in which the Fund may invest or hold include, but are not limited to: investment grade bonds denominated in various currencies, including bonds issued by the U.S. and non-U.S. governments and their agencies or instrumentalities (whether or not guaranteed or insured by those governments), corporations and municipalities (taxable and tax-exempt); below investment grade bonds; inflation indexed bonds issued by the U.S. government (including Inflation-Protected Securities issued by the U.S. Treasury (TIPS)) and non-U.S. governments and their agencies or instrumentalities (whether or not guaranteed or insured by those governments) and inflation indexed bonds issued by corporations; sovereign debt of emerging countries and other bonds issued in emerging countries (including below investment grade bonds); and asset-backed securities. The Fund has substantial holdings of GMO Short-Duration Collateral Fund ("SDCF") (a Fund that primarily holds U.S. asset-backed securities) and GMO World Opportunity Overlay Fund ("Overlay Fund") (a Fund that invests in asset-backed securities and uses derivatives to attempt to exploit misvaluations in world interest rates, currencies and credit markets). The Fund also may invest in exchange-traded and over-the-counter ("OTC") derivatives, including futures contracts, currency options, currency forwards, reverse repurchase agreements, swap contracts (including credit default swaps), interest rate options, swaps on interest rates and other types of derivatives. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund may gain exposure to the investments described above by investing in shares of other GMO Funds, including Overlay Fund, GMO Emerging Country Debt Fund ("ECDF") (to gain exposure to emerging country debt markets), GMO High Quality Short-Duration Bond Fund (to seek a return in excess of that of the J.P. Morgan U.S. 3 Month Cash Index by investing in a wide variety of high quality U.S. and non-U.S. debt investments) and GMO Debt Opportunities Fund (to gain exposure to global credit markets). The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. As a result primarily of its investment in SDCF, Overlay Fund, and ECDF, the Fund has and is expected to continue to have material exposure to U.S. asset-backed and emerging country debt securities that are below investment grade. The Manager does not seek to maintain a specified interest rate duration for the Fund, and the Fund's interest rate duration will change depending on the Fund's investments and the Manager's assessment of different sectors of the bond market.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO U.S. Treasury Fund</b> Citigroup 3-Month Treasury Bill Index	<p>Seeks liquidity and safety of principal with current income as a secondary objective. Under normal circumstances, the Fund invests at least 80% of its assets in Direct U.S. Treasury Obligations and repurchase agreements collateralized by these Obligations. "Direct U.S. Treasury Obligations" include U.S. Treasury bills, bonds and notes and other securities issued by the U.S. Treasury, as well as Separately Traded Registered Interest and Principal Securities (STRIPS) and other zero-coupon securities. The Manager normally seeks to maintain an interest rate duration of one year or less for the Fund's portfolio. The Fund also may enter into repurchase agreements, under which the Fund purchases a security backed by the full faith and credit of the U.S. government from a seller who simultaneously commits to repurchase, on an agreed upon date in the future, the security from the Fund at the original purchase price plus an agreed upon amount representing the original purchase price plus interest. The counterparties in repurchase agreements are typically broker-dealers and banks, and the safety of the arrangement depends on, among other things, the Fund's having an interest in the security that it can realize in the event of the insolvency of the counterparty. In addition to Direct U.S. Treasury Obligations, the Fund may invest in other fixed income securities that are backed by the full faith and credit of the U.S. government, such as fixed income securities issued by the Government National Mortgage Association (GNMA) and the Federal Deposit Insurance Corporation (FDIC) that are guaranteed by the U.S. government. The Fund also may invest in unaffiliated money market funds. Although the fixed income securities purchased by the Fund normally will have a stated or remaining maturity of one year or less, Direct U.S. Treasury Obligations purchased pursuant to repurchase agreements may not, and, therefore, if the counterparty to the repurchase agreement defaults, the Fund may end up owning a security with a stated or remaining maturity of more than one year. The Fund is <b>not</b> a money market fund and is not subject to the duration, quality, diversification and other requirements applicable to money market funds. In selecting U.S. Treasury securities for the Fund's portfolio, the Manager focuses primarily on the relative attractiveness of different obligations (such as bonds, notes or bills), which can vary depending on the general level of interest rates as well as supply/demand imbalances and other market conditions. The factors considered and investment methods used by the Manager can change over time.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO World Opportunity Overlay Fund</b> J.P. Morgan U.S. 3 Month Cash Index	<p>Seeks total return greater than that of its benchmark. The Manager seeks to achieve the Fund's investment objective by attempting to identify and estimate relative misvaluation of global interest rate, credit, and currency markets. Based on those estimates, the Manager establishes the Fund's positions across those markets. Those positions may include direct investments and derivatives. The Fund's direct investments in fixed income securities include U.S. and non-U.S. asset-backed securities and other fixed income securities (including Treasury Separately Traded Registered Interest and Principal Securities (STRIPS), Inflation-Protected Securities issued by the U.S. Treasury (TIPS), Treasury Securities and global bonds). The factors considered and investment methods used by the Manager can change over time. Derivatives used by the Fund are primarily interest rate swaps and futures contracts, currency forwards and options, and credit default swaps on single-issuers or indices. As a result of its derivative positions, the Fund typically will have higher volatility than its benchmark. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e. the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund has a substantial investment in asset-backed securities. The Fund also may invest in government securities, corporate debt securities, money market instruments and commercial paper, and enter into credit default swaps, reverse repurchase agreements, and repurchase agreements. The Fund's fixed income securities may include all types of interest rate, payment and reset terms, including fixed rate, zero coupon, contingent, deferred, payment-in-kind and auction rate features. Because of the deterioration in credit markets that became acute in 2008, the Fund has and is expected to continue to have material exposure to below investment grade securities (commonly referred to as "junk bonds").</p>

## GMO Global Equity Funds

The GMO Global Equity Funds (other than GMO Quality Fund) normally do not take temporary defensive positions. GMO Quality Fund reserves the right to make tactical allocations of up to 20% of its net assets to investments in cash and high quality debt investments. To the extent a GMO Fund takes a temporary defensive position, or otherwise holds cash, cash equivalents, or high quality debt investments on a temporary basis, the GMO Fund may not achieve its investment objective.

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Resources Fund</b> MSCI ACWI Commodity Producers</p>	<p>Seeks total return. The Fund has a fundamental policy to concentrate its investments in the natural resources sector, and, under normal market conditions, the Fund invests at least 80% of its assets in the securities of companies in that sector. The Fund considers the "natural resources sector" to include companies that own, produce, refine, process, transport and market natural resources and companies that provide related equipment, infrastructure and services. The sector includes, for example, the following industries: integrated oil, oil and gas exploration and production, gold and other precious metals, steel and iron ore production, energy services and technology, base metal production, forest products, farming products, paper products, chemicals, building materials, coal, water, alternative energy sources, and environmental services. The Fund is permitted to invest directly and indirectly (e.g., through underlying funds or derivatives) in securities of companies tied economically to any country in the world, including emerging countries. In addition to its investments in companies in the natural resources sector, the Fund also may invest up to 20% of its net assets in securities of any type of company. The Manager selects investments for the Fund based on the Manager's assessment of which segments of the natural resources sector offer the best investment opportunities. That assessment may be based on the relative attractiveness of individual natural resources, including supply and demand fundamentals and pricing outlook. The Manager uses a combination of investment methods to identify companies and may analyze individual companies based on their financial, operational, and managerial strength and valuation. Other methods focus on patterns of information, such as price volatility of a security or groups of securities or corporate behavior of an issuer. The Manager adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as commodity type, industry, sector, country or currency. The factors considered and investment methods used by the Manager can change over time. The Fund may invest in securities of any type, including without limitation, common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts, shares of royalty trusts and master limited partnerships and fixed income securities (including fixed income securities of any maturity and below investment grade securities (commonly referred to as "junk bonds")). The Fund may invest in the securities of companies of any market capitalization. As a substitute for direct investments in securities of companies in the natural resources sector, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, forward currency contracts, and swap contracts. In addition, the Fund may lend its portfolio securities. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Risk Premium Fund</b> MSCI World Index	<p>Seeks total return. The Manager seeks to achieve the Fund's investment objective primarily by causing the Fund to sell (write) put options on U.S. and non-U.S. (e.g., Europe, United Kingdom, Japan, Hong Kong, Canada, and Australia) stock indices. The Manager uses a proprietary indicator to determine the Fund's put-writing allocations among stock indices, depending on the relative assessment of premiums available. The Fund's portfolio allocations are based on the relative attractiveness of each index in conjunction with other factors such as the liquidity available in each index's options markets. The Manager expects the Fund to sell put options on a number of stock indices but, from time to time, the Fund may have substantial exposures to a relatively small number of U.S. and international stock indices. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund may purchase and sell put and call options of any type, including options on global, regional and country stock indices and options on exchange-traded funds (ETFs). The Fund may purchase and sell exchange-traded and over-the-counter ("OTC") options, including options that are cash-settled as well as physically settled. The Fund may purchase and sell options and other securities tied economically to any country in the world, including emerging countries. The Manager expects that the Fund's option positions typically will be fully collateralized at the time when the Fund is selling them. The Manager, therefore, expects that the Fund will hold sufficient assets to cover the maximum possible loss that the Fund might sustain upon the assignment or exercise of an option sold by the Fund. The factors considered and investment methods used by the Manager can change over time. For collateral and cash management purposes, the Fund will invest a substantial portion of its assets in shares of GMO U.S. Treasury Fund, U.S. Treasury bills and other highly rated securities, and unaffiliated money market funds.</p>

Fund Name and Benchmark	Investment Goal/Strategy
<b>GMO Quality Fund</b> N/A	<p>Seeks total return. The Manager seeks to achieve the Fund's investment objective by investing the Fund's portfolio primarily in equity securities that the Manager believes to be of high quality. The Manager determines which securities the Fund should buy or sell based on its evaluation of companies' published financial information and corporate behavior, securities' prices, equity and bond markets, and the overall economy. In assessing a company's quality, the Manager may consider several factors, including, in particular, high profitability, stable profitability, and low leverage. In selecting securities for the Fund, the Manager uses a combination of investment methods to identify securities that the Manager believes have positive return potential relative to other securities in the Fund's investment universe. Some of these methods evaluate individual securities or groups of securities based on the ratio of their price to historical financial information and forecasted financial information, such as book value, cash flow and earnings, and a comparison of these ratios to industry or market averages or to their own history. Other methods focus on patterns of information, such as price movement or volatility of a security or groups of securities relative to the Fund's investment universe or corporate behavior of an issuer. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equity securities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, forward currency contracts, and swap contracts. In addition, the Fund may lend its portfolio securities. The Fund may hold shares in fewer than 100 companies. The Fund may make tactical allocations of up to 20% of its net assets to investments in cash and high quality debt instruments. The Fund is permitted to invest directly and indirectly (e.g., through underlying funds or derivatives) in equity securities of companies tied economically to any country in the world, including emerging countries. The term "equity securities" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

## GMO International Equity Funds

The GMO International Equity Funds normally do not take temporary defensive positions. To the extent a GMO Fund takes a temporary defensive position, or otherwise holds cash, cash equivalents, or high quality debt investments on a temporary basis, the GMO Fund may not achieve its investment objective.

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Currency Hedged International Equity Fund</b> MSCI EAFE Index (Hedged)	Seeks total return greater than that of its benchmark. The Fund is a fund of funds and invests primarily in other GMO Funds. The Fund may invest in GMO International Intrinsic Value Fund and GMO International Small Companies Fund (collectively, the "underlying Funds") and may invest in securities directly. Under normal circumstances, the Fund invests directly and indirectly (through investment in the underlying Funds) at least 80% of its assets in equity investments. The term "equity investments" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Manager uses multi-year forecasts of returns and risk among major sectors in the international equity markets (e.g., large-cap value, large-cap growth, large-cap core, small- and mid-cap value and small- and mid-cap growth) to select the underlying Funds and decide how much to invest in each. An important component of those forecasts is the expectation that valuation reversion ultimately drives market returns. The Manager shifts investments among the underlying Funds in response to changes in its investment outlook and market valuations and may use redemptions or purchases of Fund shares to rebalance the Fund's investments. The factors considered and investment methods used by the Manager can change over time. The Manager assesses the currency exposure of the underlying Funds' holdings and then attempts to hedge at least 70% of that exposure relative to the U.S. dollar through the use of currency forwards and other derivatives. While the Fund's benchmark is fully hedged, the Fund may take active overweighted and underweighted positions in particular currencies relative to its benchmark. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. The Fund also may lend its portfolio securities.

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Emerging Countries Fund</b> S&P/IFCI Composite	Seeks total return in excess of that of its benchmark. The Fund typically makes equity investments directly and indirectly (e.g., through underlying funds or derivatives) in companies tied economically to emerging countries. "Emerging countries" include all countries that are not treated as "developed market countries" in the MSCI World Index or MSCI EAFE Index. The term "equity investments" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. Under normal circumstances, the Fund invests directly and indirectly at least 80% of its assets in investments tied economically to emerging countries. In addition to investing in companies tied economically to emerging countries, the Fund may invest in companies that the Manager believes are likely to benefit from growth in the emerging markets. The Manager expects that the Fund will have a value bias relative to its benchmark. In general, the Fund typically invests in companies with larger market capitalizations than does GMO Emerging Markets Fund. The Manager uses proprietary quantitative techniques and fundamental analysis to evaluate and select countries, sectors, and equity investments based on factors including, but not limited to, valuation and patterns of price movement or price volatility. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include options, futures, warrants, swap contracts, and reverse repurchase agreements. The Fund's non-U.S. currency exposure may differ from the currency exposure represented by its equity investments. In addition, the Fund may take active overweighted and underweighted positions in particular currencies relative to its benchmark. In addition, the Fund may lend its portfolio securities. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Emerging Domestic Opportunities Fund</b> N/A	<p>Seeks total return. The Fund typically makes equity investments directly and indirectly (e.g., through underlying funds or derivatives) in companies whose prospects are linked to the internal ("domestic") development and growth of the world's non-developed markets ("emerging markets"), including companies that provide goods and services to emerging market consumers. "Emerging markets" include all markets that are not treated as "developed markets" in the MSCI World Index or MSCI EAFE Index. The term "equity investments" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. Under normal circumstances, the Fund invests directly and indirectly at least 80% of its assets in investments related to emerging markets. The Fund's investments are not limited to investments in companies located in any particular country or geographic region, and may include investments in companies located in developed markets (e.g., the U.S.) that are related to, or whose prospects are linked to, emerging markets. The Manager does not manage the Fund to, or control the Fund's risk relative to, any index or benchmark. The Manager uses primarily fundamental analysis to evaluate and select countries, sectors and companies that it believes are most likely to benefit from domestic growth in emerging markets. In evaluating and selecting investments, the Manager may consider many factors, including the Manager's assessment of a country's and/or sector's fundamentals or growth prospects as well as a company's positioning relative to its competitors. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include options, futures, warrants, swap contracts, and reverse repurchase agreements. The Fund's non-U.S. currency exposure may differ from the currency exposure represented by its equity investments. In addition, the Fund may lend its portfolio securities. The Fund may make some or all of its investments through one or more wholly-owned, non-U.S. subsidiaries. GMO may serve as the investment manager to these companies but will not receive any additional management or other fees for its services. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<b>GMO Emerging Markets Fund</b> S&P/IFCI Composite	<p>Seeks total return in excess of that of its benchmark. The Fund typically makes equity investments directly and indirectly (e.g., through underlying funds or derivatives) in companies tied economically to emerging markets. "Emerging markets" include all markets that are not treated as "developed markets" in the MSCI World Index or MSCI EAFE Index. The term "equity investments" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. Under normal circumstances, the Fund invests directly and indirectly at least 80% of its assets in investments tied economically to emerging markets. In addition to investing in companies tied economically to emerging markets, the Fund may invest in companies that the Manager believes are likely to benefit from growth in the emerging markets. The Manager expects that the Fund will have a value bias relative to its benchmark. The Manager uses proprietary quantitative techniques and fundamental analysis to evaluate and select countries, sectors, and equity investments based on factors including, but not limited to, valuation and patterns of price movement or price volatility. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include options, futures, warrants, swap contracts, and reverse repurchase agreements. The Fund's non-U.S. currency exposure may differ from the currency exposure represented by its equity investments. In addition, the Fund may take active overweighted and underweighted positions in particular currencies relative to its benchmark. In addition, the Fund may lend its portfolio securities. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO International Core Equity Fund (effective on or about February 12, 2014, name will change to GMO International Large/Mid Cap Equity Fund)</b> MSCI EAFE Index</p>	<p>Seeks high total return. The Manager seeks to achieve the Fund's investment objective by investing the Fund's portfolio primarily in equity securities that the Manager believes will provide a higher return than the MSCI EAFE Index. The Manager determines which securities the Fund should buy or sell based on its evaluation of companies' published financial information and corporate behavior, securities' prices, equity and bond markets, and the overall economy. In selecting securities for the Fund, the Manager uses a combination of investment methods to identify securities that the Manager believes have positive return potential relative to other securities in the Fund's investment universe. Some of these methods evaluate individual securities or groups of securities based on the ratio of their price to historical financial information and forecasted financial information, such as book value, cash flow and earnings, and a comparison of these ratios to industry or market averages or to their own history. Other methods focus on patterns of information, such as price movement or volatility of a security or groups of securities relative to the Fund's investment universe or corporate behavior of an issuer. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equity securities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, forward currency contracts, and swap contracts. In addition, the Fund may lend its portfolio securities. The Fund typically invests directly and indirectly (e.g., through underlying funds or derivatives) in equity securities of companies tied economically to countries other than the U.S., including both developed and emerging countries. Under normal circumstances, the Fund invests directly and indirectly at least 80% of its assets in equity investments (see "Name Policies"). The terms "equity securities" and "equity investments" refer to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds. <b>Effective on or about February 12, 2014, under normal circumstances, the Fund will invest directly and indirectly at least 80% of its assets in equity investments of large- and mid-cap companies.</b></p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO International Intrinsic Value Fund (effective on or about February 12, 2014, name will change to GMO International Equity Fund)</b> MSCI EAFE Value Index</p>	<p>Seeks high total return. The Manager seeks to achieve the Fund's investment objective by investing the Fund's portfolio primarily in equity securities that the Manager believes will provide a higher return than the MSCI EAFE Value Index. The Manager determines which securities the Fund should buy or sell based on its evaluation of companies' published financial information and corporate behavior of an issuer, securities' prices, equity and bond markets, and the overall economy. In selecting securities for the Fund, the Manager uses a combination of investment methods to identify securities that the Manager believes have positive return potential relative to other securities in the Fund's investment universe. Some of these methods evaluate individual securities or groups of securities based on the ratio of their price to historical financial information and forecasted financial information, such as book value, cash flow and earnings, and a comparison of these ratios to industry or market averages or to their own history. Other methods focus on patterns of information, such as price movement or volatility of a security or groups of securities relative to the Fund's investment universe or corporate behavior of an issuer. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equity securities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, forward currency contracts, and swap contracts. In addition, the Fund may lend its portfolio securities. The term "equity securities" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p> <p><b>Effective on or about February 12, 2014, under normal circumstances, the Fund will invest directly and indirectly at least 80% of its assets in equity investments.</b></p>

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO International Small Companies Fund</b> MSCI EAFE Small Cap Index</p>	<p>Seeks high total return. The Manager seeks to achieve the Fund's investment objective by investing the Fund's portfolio primarily in equity securities that the Manager believes will provide a higher return than the MSCI EAFE Small Cap Index. The Manager determines which securities the Fund should buy or sell based on its evaluation of companies' published financial information and corporate behavior, securities' prices, equity and bond markets, and the overall economy. In selecting securities for the Fund, the Manager uses a combination of investment methods to identify securities that the Manager believes have positive return potential relative to other securities in the Fund's investment universe. Some of these methods evaluate individual securities or groups of securities based on the ratio of their price to historical financial information and forecasted financial information, such as book value, cash flow and earnings, and a comparison of these ratios to industry or market averages or to their own history. Other methods focus on patterns of information, such as price movement or volatility of a security or groups of securities relative to the Fund's investment universe or corporate behavior of an issuer. The Manager also adjusts the Fund's portfolio for factors such as position size, market capitalization, and exposure to factors such as industry, sector, country, or currency. The factors considered and investment methods used by the Manager can change over time. As a substitute for direct investments in equity securities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include futures, options, forward currency contracts, and swap contracts. In addition, the Fund may lend its portfolio securities. The Fund typically invests directly and indirectly (e.g., through underlying funds or derivatives) in equity securities of non-U.S. small companies. Under normal circumstances, the Fund invests directly and indirectly at least 80% of its assets in securities of small companies. For these purposes, non-U.S. companies are companies tied economically to countries other than the U.S., including both developed and emerging countries ("Non-U.S. Companies"). The Manager considers "small companies" to be all Non-U.S. Companies other than (i) the largest 500 companies in developed countries based on full, non-float adjusted market capitalization and (ii) any company in an emerging country with a full, non-float adjusted market capitalization that is greater than or equal to that of the smallest excluded developed country companies. A company's full, non-float adjusted market capitalization includes all of the company's outstanding equity securities. As of May 31, 2013, the market capitalization of the outstanding common stock and other stock-related securities of the largest company included within the Fund's definition of small companies was approximately \$6.0 billion. For purposes of the Fund's investments, the term "equity securities" refers to direct and indirect investments in common stocks and other stock-related securities, such as preferred stocks, convertible securities, depositary receipts, and exchange-traded equity REITs and income trusts. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

## GMO Alternative Strategy Funds

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Alpha Only Fund</b> Citigroup 3-Month Treasury Bill Index</p>	<p>Seeks total return greater than that of its benchmark. The Fund's investment program involves having both long and short investment exposures. The Fund seeks to construct a portfolio in which it has long investment exposure to asset classes and sub-asset classes that it expects will outperform relative to the asset classes and sub-asset classes to which it has short investment exposure. To gain long investment exposure, the Fund invests primarily in shares of the GMO U.S. Equity Funds, the GMO International Equity Funds, and the GMO Global Equity Funds, and also may invest in shares of GMO Emerging Country Debt Fund (collectively, the "underlying Funds"). In addition, the Fund may gain long investment exposure by investing in securities directly, rather than through the underlying Funds. To gain short investment exposure, the Fund may use over-the-counter ("OTC") and exchange-traded derivatives (including futures, swap contracts and currency forwards) and make short sales of securities, including short sales of securities the Fund does not own. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund will typically have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Manager uses multi-year forecasts of returns and risk among asset classes (e.g., non-U.S. equity, U.S. equity, emerging country equity and emerging country debt) and sub-asset classes (e.g., small- to mid-cap stocks in the non-U.S. equity asset class and quality stocks in the U.S. equity and emerging country equity asset classes) to select the underlying Funds and securities in which the Fund invests or takes short positions and to decide how much to invest and/or short in each. An important component of those forecasts is the expectation that valuation reversion ultimately drives market returns. The Manager changes the Fund's holdings in response to changes in its investment outlook and market valuations and may use redemptions or purchases of Fund shares to rebalance the Fund's investments. The factors considered and investment methods used by the Manager can change over time. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>
<p><b>GMO Alternative Asset Opportunity Fund</b> Citigroup 3-Month Treasury Bill Index</p>	<p>Seeks long-term total return. The Fund invests in a range of global equity, bond, currency, and commodity markets using exchange traded futures and forward non-U.S. exchange contracts, as well as making other investments. The Fund seeks to take advantage of the Manager's proprietary investment models for global tactical asset allocation and equity, bond, currency and commodity market selection. The Fund normally invests assets not held as margin for futures or forward transactions or paid as option premiums in cash directly (i.e., Treasury Bills) or money market funds. The Fund also may invest in U.S. and non-U.S. fixed income securities and hold shares of other series of the Trust, including GMO Short-Duration Collateral Fund ("SDCF") and GMO U.S. Treasury Fund ("U.S. Treasury Fund"), which are described in a separate prospectus. The Manager's models for this active quantitative process are based on the following strategies: Value-Based Strategies and Sentiment-Based Strategies. Value factors compare the price of an asset class or market to an economic fundamental value. Generally, value strategies include yield analysis and mean reversion analysis. Generally, sentiment-based strategies assess factors such as risk aversion, analyst behavior and momentum. The Manager may eliminate strategies or add new strategies in response to additional research, changing market conditions, or other factors. To gain exposure to commodities and some other assets, the Fund invests through a wholly-owned subsidiary. GMO serves as the investment manager to this subsidiary but does not receive any additional management or other fees for its services. The subsidiary invests primarily in commodity-related derivatives and fixed income securities, but also may invest in any other investments in which the Fund may invest directly. References in this paragraph to the Fund's investment strategy may refer to actions undertaken by the Fund or the subsidiary company. The Fund does not invest directly in commodities and commodity-related derivatives. The Fund does not maintain a specified interest rate duration for its portfolio. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund may have gross investment exposures in excess of its net assets (i.e., the Fund will be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. If deemed prudent by the Manager, the Fund may take temporary defensive positions.</p>

## GMO Multi-Asset Investment Funds

Fund Name and Benchmark	Investment Goals/Strategy
<p><b>GMO Implementation Fund</b> N/A</p>	<p>The Fund's investment objective is positive total return, not "relative return." The Manager pursues investment strategies for the Fund that are intended to complement the strategies being pursued by the Manager in GMO Benchmark-Free Allocation Fund. Accordingly, the Fund is not a standalone investment and the Fund's investment returns may be more volatile than a standalone investment vehicle. The Manager uses multi-year forecasts of returns and risk to determine the Fund's strategic direction. The factors considered and investment methods used by the Manager can change over time. The Manager does not manage the Fund to, or control the Fund's risk relative to, any securities index or securities benchmark. Depending on the Manager's outlook, the Fund may have exposure to any asset class (e.g., non-U.S. equity, U.S. equity, emerging country equity, emerging country debt, non-U.S. fixed income, U.S. fixed income, and real estate) and at times may be substantially invested in a single asset class. The Fund may invest in companies of any market capitalization. In addition, the Fund is not limited in how much it may invest in any market, and it may invest all of its assets in the securities of a limited number of companies in a single country and/or capitalization range. The Fund may invest a significant portion of its assets in the securities of companies in industries with high positive correlations to one another. To the extent the Fund invests in fixed income securities, it may have significant exposure to below investment grade securities (commonly referred to as "junk bonds"). The Fund also may have exposure to short sales. The Manager's ability to shift investments among asset classes is not subject to any limits. As a substitute for direct investments in equities, the Fund may use exchange-traded and over-the-counter ("OTC") derivatives (e.g., selling put options on securities) and exchange-traded funds ("ETFs"). The Fund also may use derivatives and ETFs: (i) in an attempt to reduce investment exposures (which may result in a reduction below zero); (ii) in an attempt to adjust elements of the Fund's investment exposure; and (iii) as a substitute for securities lending. Derivatives used may include options, futures, warrants, swap contracts, and reverse repurchase agreements. The Fund's foreign currency exposure may differ from the currency exposure of its equities. In addition, the Fund may lend its portfolio securities. The Fund is not limited in its use of derivatives or in the absolute face value of its derivative positions. As a result of its derivative positions, the Fund may have gross investment exposures in excess of its net assets (i.e., the Fund may be leveraged) and therefore is subject to heightened risk of loss. The Fund's performance can depend substantially, if not primarily, on the performance of assets or indices underlying its derivatives even though it does not own those assets or indices. The Fund may make some or all of its investments through one or more wholly-owned, non-U.S. subsidiaries. GMO may serve as the investment manager to these companies but will not receive any additional management or other fees for its services. The Fund also may invest in GMO U.S. Treasury Fund and unaffiliated money market funds.</p>

# Additional Expense and Performance Information

This section contains additional information regarding the expenses and performance of the Fund. The sub-section below titled "Additional Expense Information" provides further information regarding the Fund's Annual Fund Operating Expenses. The sub-section below titled "Additional Performance Information - Index Descriptions" defines the market indices that are referenced in the Fund Summary.

## Additional Expense Information

The expenses that the Fund incurs as a result of its investment in Benchmark-Free Allocation Fund are considered to be direct expenses of the Fund and are contained in the "Other Expenses" line item of the Fund's Annual Fund Operating Expenses table. These expenses include purchase premium and redemption fees that Benchmark-Free Allocation Fund charges its shareholders to help offset estimated portfolio transaction and related costs incurred by Benchmark-Free Allocation Fund as a result of a purchase or redemption, as well as supplemental support fees that Benchmark-Free Allocation Fund pays to GMO for certain supplemental services that GMO provides with respect to shareholders in the MF Class of Benchmark-Free Allocation Fund. In addition, Benchmark-Free Allocation Fund is charged purchase premiums and redemption fees by certain of the underlying funds in which it invests. These fees are paid by Benchmark-Free Allocation Fund from the purchase premiums and redemption fees that it charges to investors such as the Fund, which are already reflected in the Fund's "Other Expenses." Thus, to avoid double counting, the premiums and fees charged by the underlying funds are not reflected in the "Acquired Fund Fees and Expenses" line item included in the Fund's Total Annual Fund Operating Expenses table. For further information regarding supplemental support fees, purchase premiums and redemption fees, please see the section entitled "Fund Expenses" in the SAL.

## Additional Performance Information - Index Descriptions

The "Average Annual Total Returns" table in the Fund's Fund Summary compares the Fund's returns with those of at least one broad-based market index. Below are descriptions of each such index. You cannot invest directly in an index.

<b>Barclays U.S. Treasury Inflation Notes: 1-10 Year Index</b>	The Barclays U.S. Treasury Inflation Notes: 1-10 Year Index is an independently maintained and widely published index comprised of inflationprotected securities issued by the U.S. Treasury having a maturity of 1-10 years.
<b>Consumer Price Index</b>	The Consumer Price Index for All Urban Consumers U.S. All Items is published monthly by the U.S. government as an indicator of changes in price levels (or inflation) paid by urban consumers for a representative basket of goods and services.
<b>MSCI World Index<sup>1</sup></b>	The MSCI World Index (MSCI Standard Index Series) is an independently maintained and widely published index comprised of global developed markets. MSCI data may not be reproduced or used for any other purpose. MSCI provides no warranties, has not prepared or approved this report, and has no liability hereunder.

# Financial Highlights

The following tables are intended to help you understand the Fund's financial performance for the past five years (or since inception, if shorter). Certain information reflects financial results for a single Fund share. Total returns represent the rate you would have earned (or lost) on an investment in the Fund (assuming reinvestment of all distributions). The information in the following tables has been derived from the Fund's financial statements, which have been audited by KPMG LLP, the Fund's independent registered public accounting firm, whose report, along with the Fund's financial statements, is also included in the Fund's annual report, a copy of which is available upon request.

Class A	Year ended September 30	
	2013	2012 <sup>1</sup>
<b>Net asset value, beginning of period</b>	\$ 10.16	\$ 10.00
Net investment income (loss)	0.08	(0.02) <sup>2</sup>
Net realized and unrealized gains (losses) on investments	0.73	0.18
Total from investment operations	0.81	0.16
<b>Distributions to shareholders from</b>		
Net investment income	(0.03)	0.00
<b>Net asset value, end of period</b>	\$ 10.94	\$ 10.16
<b>Total return<sup>3</sup></b>	8.02%	1.60%
<b>Ratios to average net assets (annualized)</b>		
Gross expenses <sup>4</sup>	0.73%	0.79%
Net expenses <sup>4</sup>	0.73%	0.78%
Net investment income (loss)	0.92%	(0.36)%
<b>Supplemental data</b>		
Portfolio turnover rate	0%	0%
Net assets, end of period (000s omitted)	\$ 1,512,891	\$ 398,557

1. For the period from March 1, 2012 (commencement of class operations) to September 30, 2012

2. Calculated based upon average shares outstanding

3. Total return calculations do not include any sales charges. Returns for periods of less than one year are not annualized.

4. Ratios do not include the expenses of GMO Benchmark-Free Allocation Fund. The expenses of GMO Benchmark-Free Allocation Fund, Class MF were as follows:

Year ended September 30, 2013 0.50%

Year ended September 30, 2012<sup>1</sup> 0.49%

Class C	Year ended September 30
